Incident #58 - Portland, Oregon -- 24 June 1947

There is an extraordinary explanation for this incident, which would be considered to occur with the highest grade and (100%), which occurred on the same day, and in which similar objects were observed. The present object appeared to have a light brownish, another factor difference between this and the -white incident is the inferred size of the object, as estimated from the estimated distance.

It is difficult to trace exactly the peculiar action of the object, for this is in itself extraordinary, like a strange field.
