Incident #119, IISS -- Amman, Iraq -- 20 February 1968

While none of the reports of this incident are contradictory, the major portion support the hypothesis that the object observed was a "downcoming meteor" or fireball. The speed and other manner in which. The fact that the object was seen over so wide an area implies that the observer was stated that it was only 1000 feet away was in error in his estimate.
