Incident #128 - Green, Ohio -- 8 May 1948

Once again, the report given is entirely inadequate for a resolution. However, astronomical origin of the object or objects observed being very improbable.

The phenomenon described resembles the observation of an airplane passing or "burns" light reflecting a pilot air-craft. This would certainly be possible, as our phenomenon, travel at great speed, and be out in space. Such interpretation would also miss the occasional burning and disintegration as a subjective suggestion. -- However, further conditions are not stated.
