

NOTE: REMOTE SIGHTING REPORTS ON THE SUBJECTS OF THIS REPORT ARE NOT INCLUDED.

ANALYSIS SUMMARY

A. L. Smith, former Associate Liaison Officer,
Office of the Chief of Staff, United States Air Force.

The writer has received several abstracts and reports pertaining to unidentified flying objects which were forwarded by Air Force Intelligence. These abstracts are divided into three main parts. The first part is a short summary of the reports; the second part consists of a general survey of various classifications of aircraft; and the third part contains certain data pertaining to the objects.

PART I. SHORT SUMMARY OF OBSERVATIONS.

The reports are grouped as follows:

Group 1. The first group consists of reports of the action observation of metallic disc-like objects, roughly 10 to 20 feet in diameter. There is also suggestion that the cross section is conical and rather like a turtle shell. Reports agree that these objects are capable of high acceleration and turning. They often are sighted in groups, sometimes in formation, as well as in pairs.

Group 2. The second group consists of reports of lights observed at night. These are also capable of high speed and acceleration. They are less commonly seen in groups. They usually appear to be sharply defined luminous objects.

Group 3. The third group consists of reports of various kinds of rockets, in general appearing somewhat like V-2 rockets.

Group 4. The fourth group contains reports of various devices which, in the writer's opinion, are sounding balloons of unusual shape such as are made by the General Mills Company for the Contract.
