

Reconnaissance No. 30 on 14 October 1967, 1200 hours, eleven miles north,
E.S. of Carr Cross, Arizona.

Two pilot operators observed one object at 8000 to 10,000 ft altitude, bounding 550 190, i.e. in a straight line for a period of 40-60 seconds. The object was red against the sky, and black against a cloud. It appeared to be curved due to direction from point of observation. The GND report of aircraft-pilot states that one observer thought it was a missile, but decided later that it was not; the other observer said it resembled a flying wing, but was not a flying wing. No reasons are given for these apparently superficial and conflicting remarks. As in many other instances, these observers cite their flying experience as qualification for their ability to observe and report details.

AME Opinion: From the limited data furnished in this report, it is difficult to arrive at any conclusion. If the object was actually 10,000 ft distant, and yet appeared three feet wide to the observer, it would of necessity been huge. This sole point of contention tends to discredit the report.
