

Incident No. 02 -- 2 September 1947, 2300-2300 hours, Logan, Utah.
 A man and two women, together with five other unidentified people, observed five groups each of 30-40 small objects, yellowish-white in color, firing several thousand feet in the air at a high rate of speed. The weather was cloudy.

US Opinion: From the limited evidence submitted, it is practically impossible to formulate a conclusion. Part action could be attributed to alien-ness rather than to true lunar distances. In any hemisphere of darkness, any movement may be erroneous. Ground lights reflected from moving, identical objects, themselves not visible, could readily account for this report. Light colored birds are another possibility.
