

Incident No. 75 -- 13 August 1967, Salmon Dam, Idaho.

Two men reported simultaneously hearing a roar, and looking up glimpsed two objects of indeterminate size, several miles eastward at a great height which they thought might have been 1000-2000 feet. The objects were "circular", "reflected light", and were traveling at "great speed" although occurring on the same day as Incident No. 75, the descriptions vary widely.

It is noted that there is no information contained in this report to refute the assumption that these may have been ordinary aircraft at too great a distance to discern details.
