

UNCLASSIFIED

the RIA to the AEC, Study Report of Conference on "Green Fireballs"
(Project Grudge).

5. It was the conclusion of the group present at the meeting that the present information on the phenomena was not sufficiently quantitative and objective to allow any profitable scientific investigation. Instrumental observations (especially photographs, triangulation, and spectroscopy) were considered as essential.

6. Dr. Joseph Taylor, who was officially representing the Scientific Advisory Board, USAF at the meeting, plans to report the problem to the next meeting of the Board (2 and 3 November 1955) with the recommendation that the study provide a suitable investigation of the phenomena using the Geophysical Research Directorate, Air Force Cambridge Research Laboratories, AEC as the agency for the project.

7. It is the opinion of this office that the Geophysical Research Directorate, AEC, is capable of performing the required investigations (by photographs and spectroscopy means) provided that necessary funds, personnel and instrumental equipment are provided. Agreement as to the phenomena appears to be atmospheric in nature, such an assignment is considered appropriate.
