-3-

French, although he observed no objects, did hear a very loud noise above the clouds early one morning which he does not believe was aircraft. He asked the local radio station to help; his phone was kept busy for four hours. There is no question that the noise existed, but no one saw anything.

Astronomer Y has made no sightings. He was so interested in speaking of his eye troubles that it was impossible to bring the conversation around to scientific problems. His professional rating is only intermediate.

Astronomer Y was difficult to interview in the subject and did not admit to having seen anything.

Astronomer Z, with a high professional rating, has made no sightings and exhibits an extremely negative attitude toward the whole problem. He feels that all sightings except the green fireballs are merely misrepresentations of familiar objects, and he has no patience with the subject. He believes that La Paz should have enough data to get the heights of the green fireballs, and therefore settles the question. La Paz, when questioned later, said he did have sufficient observations and the objects were right in the middle high. Astronomer Z, who happened to be present when Astronomer Y was "summed off", again reiterated that it would be a good idea for some astronomer to take a responsible attitude toward this problem, and that we will get no place by merely postulating it.

Astronomer Y has made no sightings that has stated, "If I saw one, I wouldn't say anything about it". This statement led the conversation into the question of what conditions would have to be met before he would report it. The answer from him was the same as from several other astronomers, that if
