-17-

between 8:30 and 9:00 AM he noticed a disc-shaped object in the sky. It was flat and round like a flat plate. It appeared to be made of metal/iron and gave off reflected light very similar to the light reflected from a highly polished airplane wing. The full details of his sighting are in my notes. I obtained his cooperation and he would be very glad to fill out an official questionnaire.

I also interviewed, while in Albuquerque, Mr. Nelson and Mr. Harris, the two gentlemen whose picture appeared in Life magazine in the two famous articles on flying saucers. I questioned them separately and found that their stories were remarkably consistent. Indeed, since they viewed the object from widely different parts of the city, there is some possibility that the parallel of the object can be obtained by making telescopic sightings now as where the object appeared to them. The position of the object can be identified now because it was viewed close to a corpse in the newspaper. Dr. Lo has his kindly offered to obtain the parallel of this object for us.

REMARKS AND CONCLUSIONS

Over 10 astronauts were interviewed of which five had made sightings of one sort or another. This is a higher percentage than among the populace at large. Perhaps this is to be expected, since astronauts do, after all, watch the skies. On the other hand, they will not likely be fooled by balloons, aircraft, and similar objects, as was the general populace.
