

THIS PAGE IS UNCLASSIFIED

caused by a reflection from the setting sun but it was evident that the head of the object was much brighter than the remainder of it. The object was very easily visible and I was able to follow it in its entirety through my flight glasses at all stages of the flight. My glasses are 6 power (+ 6 X) and the glasses that Major Mathews had were somewhat stronger, they were 7 power. I don't recall the angle. The course followed by the object apparently was not perpendicular to our line of vision. It appeared to be following a course slightly west of northward, this accounted for the fact that the object looked much larger when I first saw it than it is later on. The only witnesses other than Major Mathews and myself, that I know of, were men/ women, who did not pay much attention to the object, and neighbor-hood children who would not be able to give any clear description."
