KITH HIGGINS

As above Wright Field on the south edge moving slowly towards the west a very brilliant, somewhat would be comparable to possibly a star in the sunlight shining\*\*\*\*\* first I thought it was an airplane or possibly a helicopter cause it was essentially very slow and widened it moved gradually\*\*\*\*\*change altitude, but it moved away from the car. The top speed was possibly thirty or forty miles an hour. It was moving away from the car. It was estimated, 7000 miles roughly.

Q: You say it appeared to be over what part of the field?

A: I would say it was traveling pretty closely parallel to Airway Road, and almost directly above.

Q: Did it appear to be paralleling in one particular direction?

A: Yes. It didn't change directions very swiftly, gradually it seemed to move toward the north a little bit, but in the general direction of the east.

Q: Did not have the appearance of any type of conventional aircraft or structure?

A: No, it didn't have any distinguishable outline. Somewhat oval, white, nothing\*\*\*\*\*shape distinguishable outline to it at all.

Q: Were there other witnesses in the\*\*\*\*\*?

A: That's right, there is one in this\*\*\*\*\*office and there were two\*\*\*\*\* in the construction area down in Airway Road\*\*\*\*\*looking up at it. It was quite obvious that they were looking at it.

Q: Well, this is the only report we have received so far on it. I certainly thank you for calling and if we get any more reports it will give us a little more to look of what it was.

A: Would you like to talk to one of the other gentlemen who saw it?

Q: Well, I believe your report will be sufficient, Mr. HIGGINS, but what I am going to do, I am going to have it over to W&S. They quite often conduct conversations with all sorts of outlandish people. In all probability, it was some sort of a test they were making with some sort of a\*\*\*\*\*to talking what it might be.

A: Is there any chance of us ever hearing about the results of that?

Q: Well sir, you can call us in about ten days or so and if I receive any more on it, certainly, there is no real official action we could take. You know, unless it is something that is really mysterious. It is really a little bit out of our line. It's like safety, but we are interested in finding about any of these things. We will probably find out through what is in some sort of an experiment project the boys over at R&D.
