## AIR INTELLIGENCE INFORMATION REPORT

Mr. W. S. B. Ross, Italy

15-000-01

I observed the phenomenon over my house after the plane had taken over 2000 (between noon and 1 p.m. of 10 June 1946) and sometimes even four times in the afternoon.

In conclusion, the artificial particles are the so-called flying saucers and the visible portions of the trajectories of the halo are what is erroneously considered the trajectory of the saucers.

The artificial moon balls and the rock saucers have a similar nature.

I think that the artificial phenomena of perambulation and parades, though similar to the natural phenomena, are to be considered new.

In case my theory will be confirmed by scientists' experiments I propose it be called "fractal effect" from the name of the region where I first observed the phenomenon.

Astronomical Opinion on the Nature of  
Flying Saucers

Some astronomers admit that flying saucers' origin is to be traced to astronomical phenomena such as round lightning (in this case they should have become common only now, while they were quite rare in the past), aurorae, fire balls, Venus planet, but nobody thought of optic phenomena. They declare that saucers are built up now. In general the lack of interest is a scientific inquiry caused the most stupid hypotheses.

Conjectures that Flying Saucers are not Objects or Machines  
built by Man

1. Such phenomena have been observed far more than five years, but no discs or other objects have ever been found.

2. Matter, which reached a considerable speed, would have spotted any unidentified object in the atmosphere.

3. Anybody who has a fair knowledge of physics (especially gravitation) naturally, if they will ever admit that even the moon (384,000 kilometers from the earth) or Venus (40,000 kilometers) can arrive from by being being through the atmosphere, can stop and answer at some miles of distance from the earth without stopping.

On the other hand, they cannot be explained because in case they they would have been spotted.

4. An additional demonstration that flying saucers are optical phenomena is given by the fact that they have not been observed in certain places and in a limited range (less than 2 kilometers).

5. I can add, as a plain and clear proof in support of my theory: a newspaper clipping reporting a description of flying saucers made by two employees of good names:

6. Catania At about 11:00 yesterday evening a sergeant and a police man of the police patrol were reported to have observed an object similar in shape and size to the moon. The
