Well if no been known were the
some time that Dr. Mengel of Newark
University wrote a book and described
this righting of England as material
personnel which is a list of heavy
if you read my biography. He did
not think there is for the world
that book. Mengel did say that when
he wrote his book, but in 1938. He
wrote his mistake because he had
never seen a flying object. He says
you read, as if you can make it
then that it really was really it
that he saw instead of a "woman" as
the little seems to be. I have the my
self when I saw this "flying saucer" in
1938. That it was indeed material, making
that it seemed like it did not quite belong
in our atmosphere, put it into there.
The book will force "Project Bluebook" in England
