Research by SBEDV:

In regard to the pictures (fig. 1 to fig. 4) those refer to a luminous effect that took place (read also SBEDV Bull. nr. 8 it. 14-b) at the school Horacio de Mello at Cavaru (fig. nr. 1 ) the school (arrow) in the back ground of the railway station; Paraíba do Sul at the state of Rio de Janeiro, at the month of June 19, 1958, first published by the papers at that date, but we got a nice letter from the schoolmaster at Aug. 3, 59 and at March 17, 63 had an interview with her, on the spot, when we took the pictures by her explanation, which were the following: At recreation time at 3PM the pupils Georgelina Cunha (then 10) and Jorge of the elementary school in the schoolyard (and also the teacher) spotted 3 to 4 km away a luminous object with sort of a tail which traveled 50 to 100 m over the (50 to 100 m high see fig 2), hilltops. When re-entering the class-room the teacher noted that inspite of a sunny day, suddenly it got dark inside and a girl in the 2. row of the seats would remain standing inclined forward with an intense luminosity on her girdle, which was interpreted by the teacher as a joke of a mirror, but the girl protested innocence. Strange it seemed to the teacher afterwards, that a boy sitting besides her on the catheter, hadn't seen the phenomen, since his "eyelids had got heavy", at those moments. All of the class could then see the movements of the light a solid gadget or an electr. magn. phenomen (see fig. nr. 4) which leaving the girl's girdle kept moving (during 5 minutes) along the wall of the room, sometimes stopping on objects so at the board (fig. 3) and some curtain. Everyone got excited and the teacher invited the class to leave the room to look for more on the outside. To everybody's surprise a luminous sphere (diam. approx. 20 cm) was seen trailing away, about 10 to 20 m ober the ground in an helicoidal movement to the next hill, 50 m away. The children noted then a fine silvery powder which was falling down on them, sticking to the hair and skin of the face and hands, but washed away inside the school immediately, as ordered by the teacher. A medical Doctor of the town had seen a luminous sphere at 4.45 P.M. the same day and the pupil Josias (his home was 50 km away and had school in the morning) and another girl, Helia Silvia also had seen the object .

\* \*

From the Archives of Sr. Rupert Kiener (CBFOANI), Ilha Bela, Litoral norte (Est. Sao Paulo) Brazil. Fig. nr. 5 refers to a approx. 35 m (diameter) round object, with a metallic and, bluish touch and an assimetric cupula ( see figure), which in the air accompanied the truck of a General in Company with other 6 witnesses this during a 70 km long trip in the mountains between Caraguatatuba and São Jose dos Campos an airforce research base, which was overflown by the object when last seen. No noise could be heard and no windows were seen.

\*  
\* \*

Fig. nr. 6 refers to an object seen by mr. Kiener's wife, at 12 h. noon time, May 31, 63, flying slowly southwards at high altitude.

\*  
\* \*

Fig. nr. 7 refers to 5 objects seen by Emilia Pacheco de Castro, a bookkeeper with masterdegree, when at Jan. 10, 64 at 7.30 AM, those were overflying the

Praça João Mendes in São Paulo, with a blue sky and some little misty clouds as the background. Observed during half a minute no noise was heard, but they trailed a short whitish tail, disappearing quickly. The object in front, leaving its position, advanced a bit and the object on the left stepped outside, but both retook their previous places immediately. When traveling behind the misty clouds, the aspect of the objects took bluish phosphorescence.

Sr. Walter Sá Cardoso, rua Santa Cruz, 291, Faról, Maceió, Alagoas, Brazil, refers (letter from Dec. 19, 63) to an event witnessed by Wilson Lustosa, a goldsmith, when on a trip from Maceio to Paripueira along the beach at 6 AM at April 58. At the spot "Saude" he stopped to ask a group of fishermen, why they were looking so intensely up in the sky and they answered they were looking up to a F.S. but they asked Wilson just to "wait and see" since he was getting impatient, and nothing was happening at first. All of a sudden a buzzing noise was heard but increasing its intensity a round object was seen increasing its size, like falling down, but just 15 m over the water of the sea at 40 m distance from the group it stopped suddenly and immobilised floating in the air, after having first balanced a bit. Its height was 15 to 20 m and had the tallness of a little "village circus", but had 3 parts (look fig, nr. 8 sketch done by Mr. Cardoso), an opaque inferior, a aluminium coloured superior one, and a little prominence on the latter with a light of the welder's arch intensity. A row of quadrangular windows seemed to be located on a bulging rim, where the inferior and superior cupulas met. A reddish light seemed to come through the windows and so those near of the observers would get obscured, as when people were standing inside behind them. The water below the craft seemed to be boiling or sugued upwards, but without reaching the craft, and still a buzzing noise of low intensity could be heard, with little pauses. Some irregular prolongations, comparable with pieces of stiff cow's skin, were hanging down from the bottom of the craft, but without movement and use, apparently. The craft during an hour, ascended several times to the sky, only to come down as if crashing, with the most earshattering noise did this in repetition of the first manoeuvring observed. This important report, also told to the F.S. reporter João Martins was by him silenced in his important Rio Magazine, "O Cruzeiro".

\* \*

José Gomes Cabral (rua Menelick Carvalho 71, Uberaba, Est. Minas, Brazil) a surveyor, when working at April 26, 62, at 2 PM at the spot "Corrego do Cemitério" at the right border of the river Rio Grande, in the county of Iturama (Triangulo Mineiro), got his attention called by a boy Fernando to a silent spheric chromium coloured aircraft, moving in the sky toward the group. It seemed to reflect the sun-rays but when traveling in front of the 3 witnesses (including farmer Adolfo Soares Barbosa) it seemed cigarshaped (a sketch was sent to us by Mr. Cabral) at a distance of 3 km, but when farther away it turned to look like a sphere once more.

\*  
\* \*

1963 F.S. movement of Brazil (events of Argentina already have been reported by other F.S. Bulls) At Febr. 6, at Casa Branca. (Est. S.P., Febr. 7, 63) several persons saw a luminous object moving slowly.

\*  
\* \*

At João Pessoa a circular object with an intense, metallic brilliance was seen by numerous witnesses when flying over the sea during 15 minutes, when "box-like objects" were seen falling from it into the water. Some hours later, apparently the same object was seen flying around some spots in Alagoinha, as "in search of something" (J. Com., Rio, March 19, 63).

\*

\* \*

A km away from the town Itabera 6 witnesses (including Sebastião Domingos dos Santos and his brother) saw a big luminous sphere which was "moving from one side to the other with incredible speed" (Diar. Noite, 2.ed. S.P. Apr. 26, 63)

\*

\* \*

Near the border of the states of Paraná and Santa Cath. (Brazil) a "strange object" was seen falling down with a tremendous explosion as told by the people of São Pateu do Sul and Miss Clara Sialkowski from Malé. (Diar. Paraná, Feb. 24, and Feb. 28, 63)

*S. Mateus do Sul Paraná*

\* \*

1963

At Iguape, at Oct. 29, at the coast south of Santos, a girl, Ruth Nunes de Souza, 8 years of age, saw a luminous disc, "bigger than those round bathtubs for babies" (of 30 cm) falling down with enormous noise, avoiding in hitting the roof of her little house, hitting some brushes and then water level of the river, so to cross it by several jumps but to dive near the other border, when the water would begin to boil and a foam would accumulate on the surface and the water would get cloudy. Some of the latter events were seen also by the Japanese farmer Issuo-Oikiti (when hitting the water) and also the girl's mother had heard a noise "like of a jet liner". Voluntary divers had difficulties to locate the object in the river's muddy bed (Diar. Noite S.P. 1. and 2. ed. Nov. 7, A Nação, S.P. Nov. 9, 63).

Editor's note Most readers will agree with us in so far we are living in times of many moves. In our own hemisphere several legal governments have been "silenced" in the last couple of months, even heads of state have been silenced physically in Saigon and Dallas. Liberty of information (\*) is still not universal and even so a President speaking of "depolarisation (Time Feb. 7, 64) of power" may have had the meaning of more political liberty, we may perhaps not yet be in the position of equality or superiority in our earth's behaviour. (\*\*) ... continues.

(\*) Mrs. Silvia Sutton, (Vict. F.S.R., Toorak, Australia) refers to a letter from a government official (Oct. 8, 63) "... considering there is no reason for making statements to the public (about Ufo reports).. also (the government) keeps in touch with other.. friendly.. governments.

(\*\*) so to judge and condemn spacecrews, as this is done by groups that work in their "states best ( economical and political) interests". H.W. Henson expresses ( in an article "The Space Age" in Orbit) "... each planet is a sphere of development to which man is tied, in the evolutionary process, (\*\*\*) he reaches a certain ( level)..one sees why no direct contact is made with earthman at this stage.."

So it seems to us, that G. Adamski ( Science of Life-Study Course, 314 Lado de Loma Drive, Vista, California, USA) may have the last word in contact matters, in not a too far future, when mutual respect on earth is "in" and competition is "out"

Se to speak <sup>about</sup> the trend of specialisation in research we may quote K. Veit's (Wiesbaden-Schierstein, Ventla Verlag) booklet "Erforschung ausserirdischer Weltraumschiffe", good work of compilation of work and literature connected to the last F.S. knowledge. Also it seems gratifying if several distinct F.S. groups go together, so to cover in their research a country, so it's beeing done by Buforo in England. Fine research has beend done by the austrian group of Linz observing the emitting and recollection(\*\*\*\*) of luminous balls, sent out by the tubes of a spheric luminous spaceship, which investigated apparently some austrian mountain caves at night by this process. We are thankful also to H. Brettschneider from wien for the many Ufo photographs he has sent us and in relation to Mr. Junc-Ichi Takashi who seeks advise in relation to a nice Ufo picture, we would like to refer to an earlier SBEDV Bull. when tackling allready with that matter, as microscopic aspects of grains of the emulsion and also shades, grades of shadows on the copies and estereo-pictures.
