PRESENTING CUFORN'S CODE OF ETHICS

The five basic tenets of CUFORN's code of ethics are:

- 1) **SCIENTIFIC DETACHMENT:** The investigator should always look into each case as objectively as possible, with the main aim of discovering the truth.
- 2) **HONESTY:** Researchers must correctly inform the persons from whom information is sought of the following items:
 - a) The investigator's training and qualifications.
 - b) How you are recording the information extracted.
 - c) How the information is going to be used.Avoid exaggeration and confusion in favor of an honest, sincere presentation of yourself and your objectives. Do not stimulate false hopes of fame or profit, encourage delusions, nor over-emphasize the role or importance of CUFORN vis a vis other organizations. Give the percipient a frank assessment of the **validity** of the experience as evidence of an anomalous event, when the inquiry is finished.
- 3) **PROTECTION OF THE PERSONS INVESTIGATED:** Protect the welfare of the individual **whose report you are investigating**. Refrain from inquiries which would constitute invasion of privacy. You should emphasize that CUFORN will not divulge the names of persons without their consent. The investigator will not exploit his/her position of trust for financial, egoistic, sexual or other personal motives. Even the appearance of improper behavior should be avoided, as standards vary and the community in which the investigator operates may have a stricter code than his/her own.

Actions which cause the observers concern or distress are justified only when (a) the observer gives informed consent to them (see above) and (b) if they contribute to a long-term reduction of more serious problems caused by a UFO experience and its consequences.
