Crescat scientis vita excolatur (where knowledge increases, life is ennobled)
VOL. 19, NOS. 2 & 3 MARCH, APRIL, MAY, JUNE, 1998--SPECIAL DOUBLE ISSUE

Whitley Strieber is seen here about to autograph his new book, Confirmation at the Eternal Moment Bookstore in Toronto on Saturday, June 6, 1998. His publishers in Canada, McLelland & Stewart, put him on the afternoon TV interview show, Jane Hawtin Live! where he made a great impression on her and the viewing audience. He also appeared on several radio stations and bookstores such as The Omega in Toronto.

IN THIS ISSUE:--WHITLEY STRIEBER IN TORONTO PROMOTING NEW BOOK

SPECIAL OFFERS

RARE, OUT OF PRINT SPECIAL
THE UFO PULSE ANALYZER - - only 14 copies left of the April, 1977 issue and one of the June, 1977 issue.

For sale at \$6.00 each including postage and handling. Make cheque or money out to "CUFORN, Inc." and mail it to Box 775-47, 582 Sheppard Ave. West, Downsview, Ontario, Canada, M3H 6A7

A COMPLETE INDEX FOR "SITUATION RED-THE UFO SIEGE",

by Leonard Stringfield. Now available for the first time. This 1,185-item, 46 page index gives you a complete and valuable guide to a classic book.

Send cheque or money made out to "Lawrence J. Fenwick", Mail to P.O. Box 77547, 582 Sheppard Avenue West, Downsview, Ontario Canada M3H 6A7. Price for Canadian residents: \$8.00, for other countries: \$10.00

UFO SERVICE

Enlarged listing of 162 sources of worldwide UFO information. Send \$5 cheque or money to Investigator/Lecturer George D. Fewcott, 602 Battleground Road, Lincoln, North Carolina 28092, U.S.A. If from overseas, write first for extra cost for postage/handling

**Have you seen a UFO?
 Have you had contact with an
 alien intelligence?**

The National UFO Museum is engaged in a research project to get to the truth of the UFO phenomenon. Any information you have on the subject is vital to unraveling this mystery.

If you have had a sighting or contact, please send us a description and include as much of the following information as you can recall:

1. Time, Date and Location.
2. Describe the incident.
3. Can you Draw what you saw?
4. Were there any Photos, Physical evidence, or other Witnesses?
5. Include any other relevant evidence and information.

Please send to: National UFO Museum, P.O. Box 20593, Sun Valley, NV 89433 U.S.A.

WHITLEY STRIEBER IN TORONTO PROMOTING NEW BOOK by Lawrence J. Fenwick

Your Editor and Whitley Strieber are seen here at one of Toronto's New Age bookstores on his visit of June 6, 1998.

When an author sets out on a tour of bookstores to publicize his new book, he usually does not get to exchange information with the people who meet him. They are mainly there to get the author to autograph his book after they buy it. This was not the case in Toronto at one bookstore when Whitley Strieber was there on Saturday, June 6, 1998.

Strieber chatted with 40 people who gathered in the store to see him and, if they could afford the \$33.00, buy his new book, *Confirmation*. In reply to questions about his opinions, he was neutral about Robert Lazar, praised Colonel Philip Corso, and said that he did not consider "channellers" as genuinely getting information from aliens.

I met him at "The Eternal Moment" bookstore on Bloor Street West at Brunswick. He was there from 1.00 p.m. to 1.45 p.m. He autographed my hardcover copy of his first UFO book, *Communion*. Store owner

and former CUFORN member Mary Anne Solski was most kind in that she handled the promotional visit. It would have been even better had the store sold UFO books. Other than a few of Strieber's books the only other UFO book for sale there was the classic Arnold and Palmer book, *The Coming of the Saucers*.

Confirmation had four major errors about the late abductee and CUFORN member, Betty Stewart Dagenais. When I told Strieber about them, he was very gracious and thankful. He asked me to send him all I had on her case, which I did. Former member Kevin Gariepy had bought the book and called me from Vancouver, British Columbia to tell me of the errors. I passed the data on.

Strieber's address, for those who want it is: The Communion Foundation, 5928 Broadway, San Antonio, TX 78209, U.S.A.

1,000 ATTEND WORLD UFO CONGRESS IN BRAZIL

by Gabor Tarcali

The convention centre in Brasília, Brazil was the site of the World UFO Congress from December 7 to 14, 1997.

This young capital city arouses very mixed impressions in a European visiting here. The enormous parks and empty areas, out of use for the time being, give the heart of the city an almost rural character. In the city centre, the modern luxurious hotels reach up to the sky--the UFO researchers were accommodated in one of these, from where they were transported each day to the site of the event. We also saw government buildings, hospitals and cathedrals, all of them in an ultra modern architectural style.

This, for a large part, is thanks to architect Oscar Niemeyer, who dreamt up the image of the new city. Wide, six to eight lane boulevards run between the poems of architecture, on which there is a constant flow of milling traffic--which is completely natural if we consider that pedestrian traffic is almost impossible due to the relatively large distances in the capital city.

But whatever method we choose for getting better acquainted with the city, a completely different, extremely rich world of vegetation with unsurpassable beauty spreads before our eyes, giving just a minute taste of the primeval Amazonian jungle's vegetation. In this rich and sparkling brightness, it is even more sorrowful to know that there are slum areas, homes and conditions which would seem impossible. This is also a feature of the city's image. However, we were lucky to become closely acquainted with the average Brazilians with their lack of inhibitions, constant good humor and self-

confidence, and we were able to meet numerous researchers here from 19 countries in five continents. They were the cream of the crop.

We met Budd Hopkins, Stanton Friedman, James Hurtak, Jesse Marcel, Jr., Russian astronaut Alexander Balandine, Michael Hesemann from Germany, and British crop circle specialist Colin Andrews. I represented Hungary and Central Europe. The Congress was directed by A.J. Gevaerd. During the convention, 78 lectures were given before close to 1,000 interested listeners.

The event causing the biggest sensation of Congress was the details of the Varginha case of January, 1986. This was near the town in the State of Minas Gerais. Several eyewitnesses noticed a UFO sitting on the ground close to the Highway. Alien beings came out of the vehicle and appeared to inspect something on it. A loud noise came from it during the period of observation. It may have been a forced landing or crash.

Twenty minutes later, military helicopters, trucks and ambulances arrived at the site and the area was closed off. The saucer-shaped UFO was taken away. There was a gaping hole where it had landed. The beings were captured, although probably not all of them, because searched were carried out in the area for days after the event. Civilians said they had seen beings which were small, with big red eyes and two strange bulges on their heads. These beings were taken to a hospital, but nothing is known of their final fate. Research is continuing to find out more.

WORLD CONGRESS CONTINUED

Jesse Mareel's account of examining debris from the Roswell crash was interesting. His father had brought it home briefly before taking it to the U.S. A.A.F. base at Roswell in 1947.

We heard a lecture from Russian astronaut Alexander Balandine who said astronauts frequently had UFO experiences during their space flights, but could not, or would not make reports about their experiences. Luckily, this was not the case at the congress, Balandine told the audience about numerous observations of this kind.

Michael Lindemann spoke about government secrecy on the UFO subject, including mentions of their contradictory statements.

Fred Woods from Houston, Texas spoke about encounters on highways in the U.S. since 1989. Woods is President of the Houston UFO Research Network. He said HUFON has examined the recent reports from Mexico.

Former American pilots Donald Ware and Wendelle Stevens spoke of their own experiences during flights.

Yvonne Smith from Los Angeles described her own experiences, while Budd Hopkins spoke about abductions. David Jacobs gave the audience information disclosed under regressive hypnosis.

There was a lively (if you will pardon the pun) debate about the so-called alien autopsy film. Debaters were Graham Birdsall from England, Michael Hesemann from Germany, and Italians Roberto Pionotti and Mauricio Baiata.

Colin Andrews of the U.K. gave his evaluation of the "crop circle" subject. Later, Glennys Mackay from Brisbane, Australia, stated that the number of UFO observations had increased significantly there, especially CE3's. What is most interesting, however,

is that recently the cases of animal mutilation have also increased in Australia. Although no one has proven the government is connected to the mutilations, a large section of the population is interested in these unexplained phenomena.

Representing China, Sun Shili reported that in his country almost 50,000 people are in UFO research, and about 10 percent of the nation's population has had UFO experiences. This is a lot of people--120 million or so.

The series of lectures was further enriched by the report of Peter Davenport of the U.S.. He said witnesses saw a triangular-shaped UFO of about 3,000 meters width near Phoenix, Arizona. White rays of light lit the ground from the craft in several places. A short while later, the object accelerated to a high velocity and disappeared. This size of a UFO would have encompassed at least 150 Boeing 747 aircraft in total.

An air display of Sao Paulo caused at least as great a surprise for the observers, according to Brazilian researcher Ricardo Varela Correa. A flight of five military aircraft was accompanied to its end by a spherical-shaped UFO which disappeared within one second.

In answer to our questions, Rodrigo Fuenzalida from Chile said that many kinds of UFO occurrences happened there also. This prompted the Chilean government finally to take this problem seriously, and finally to join in research as well, setting an example to the other countries. In Chile, besides the civilian UFO research groups, a team of this kind operates officially in the armed forces. (A European example of this is only known in Belgium up to now). With such favorable conditions, we were not surprised by the proposal of the Chilean organizations to hold a World Congress next year in their country.

WORLD CONGRESS CONCLUDED

From our country (Hungary), by way of his lecture, Gabor Tarcali acquainted the audience with the Hungarian and Central European UFO occurrences. The greatest interest was aroused by a case at Mezobereenyi, together with crop circles in Poland, Romania and Hungary.

Finally, the congress delegates and invited lecturers drafted a congress message with the title of "Letter of Brazil". The letter was attested to by the participants with their signatures. The message was accepted personally by two Colonels who were present at the scene representing the Brazilian Ministry of Defense.

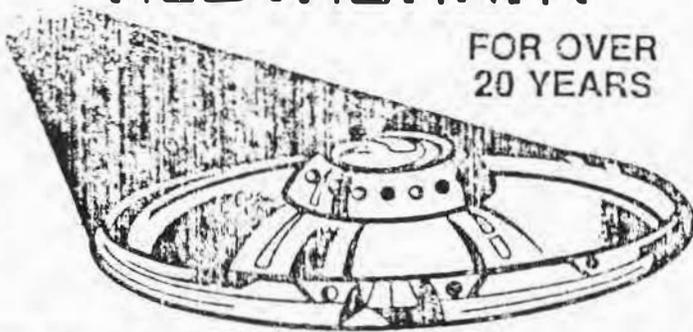

39 of the lecturers at the World UFO Congress pose for the camera during the week-long meeting.

Seen conferring here at the Congress are CUFORN's Gabor Tarcali (left) from Hungary, and Arturo Pratt with Rodrigo Fuenzalida; both from Chile,

Brasília , Brazil, December 14, 1997.

BRASÍLIA'S LETTER

Brazilian and foreign ufologists, from 19 nations of all continents, gathered at the First World UFO Forum, from December 7 to 14, 1997, in the World Parliament of Ecumenical Fraternity, ParlaMundi of the LGW, in Brasília, Brazil. The following facts were presented in the presence of the Brazilian air force minister:

1. That it is of general knowledge that the UFO phenomenon, represented by the constant visits of space vehicles to planet Earth, is genuine and been independently confirmed by civilian ufologists and military authorities throughout the world for the last 50 years.
2. That the origin of such phenomenon, already identified as extraterrestrial and whose visiting vehicles come from civilizations technologically far advanced than our own, co-exist with us in the Universe.
3. That such civilizations are in a continuous process of approaching Earth and our planetary civilization. Also, that these civilizations, through their maneuvers, most of the time, display no hostility towards us.
4. That the visits of such extraterrestrial civilizations to Earth have been gradually increasing over recent years. according to statistics provided by national and international statistics, not only in quantity but also in intensity.
5. That it is urgent to establish an official programme of knowledge, research and public education of the topic. Through such methods. make it clear to the Brazilian population the ever growing, undeniable and extraterrestrial presence on Earth.

Thus, considering the adopted attitudes taken by countries who have already recognized the extent of the problem, such as Chile for example, who a few weeks ago established a UFO investigating committee, we respectfully recommend that the Brazilian Air Force, or some of their departments, adopt a similar approach to formulate an appropriate way to discuss the subject at all levels possible.

The Brazilian UFO Community, through this act represented by the national researchers whose names appear below and with the full support of the World UFO Community, represented in this act by the undersigned, wishes to volunteer its knowledge, effort and dedication should our proposal become a reality.

As an initial point in this process, something that would represent a positive action taken by our authorities, the Brazilian UFO Community respectfully requests that your Ministry opens the files about at least two specific and remarkable episodes of our UFO research.

- (a) The Operation Prato, conducted by the First Air Regional Command (CCMAR) of Belém, Pará State, between September and December 1957, that resulted in a large volume document, complemented with more than 500 photos and many films, the movements of UFOs above the Amazon Region, as was confirmed by Colonel Uyrangê Bolívar Soares de Hollanda Lima, and
- (b) Ufological phenomenon which occurred in May of 1986, over the states of Rio de Janeiro and São Paulo, among others, when more than 20 unknown flying objects were observed, monitored, recorded on radar and were chased by Air Force jets, according to the Aeronautics Minister at that time, Brigadier Octávio Moreira Lima.

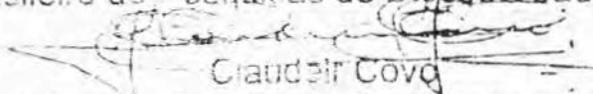

Given that civilian and military authorities have been aware of the UFO situation and have monitored it at different levels over past decades, always in the interest of national security, we believe that this initiative and agreement would solidify the beginning of a meaningful and prosperous partnership.

Cordially,

A REPORT ON THE UFO SYM- POSIUM OF OCTOBER 12, 1997 IN GDANSK, POLAND

by Robert K. Lesniakiewicz

A TV movie about the Gdynia Harbor, Poland UFO crash of January 21, 1959 was the highlight of the Gdynian UFO Symposium of October 12, 1997. The film was made by the Japanese NHK TTC Channel 8 TV Center in 1996.

The Symposium was organized to celebrate the 50th anniversary of the first Polish UFO sighting and 20 years of the Polish ufological movement. Ms. Monika Dymecka and Bronislaw Rzepecki directed the event which was held in the Gdynian Trade Center at 5 Beniowskiego Street in Gdansk. Those present included Polish ufologists Rzepecki, Anna Milewska, myself, Jaroslaw "Fox" Krzyzanowski, Krzysztof Drozd, Robert Bernatowicz, Mrs. Sofia Piepiorka, and two special guests, Gabor Tarcali of Hungary and Dr. Milos Jesensky of Slovakia.

Miss Milewska of the Gdynia Branch of the Cracovian UFO Research Group told us about the sightings in Gdansk Province, which had taken place from 1945 to 1997. This includes USO (submerged) sightings as well. She knows about seven such sightings made by fishermen and Polish Navy sailors, who in two instances had hunted for the POSSUB (possible submarine) object, which had almost sunk three fishing boats. These USOs were very quick-moving objects. They moved faster than the ALPHA (Zolotaya Ryba) Russian submarines. They were probably the newest NIKE-type rocket submarines (boomer) or the AGULA-type attack submarines. However, nobody is quite sure of that. One thing is sure: the Navy ships and helicopters were unable to

overtake these objects.

PROJECT ELECTRA

Engineer and Border Guard Capt. (Retired) as I am, I represent the group Jordanol of Jordanow in my lecture. Electra was made by myself in the 1987-1996 period. I investigated 99 cases and incidents of UFOs and phenomena traditionally connected with them. I enriched the classification of the UFOs into three types: the CUFO (Cigar-shaped UFO), the IUFO (Invisible UFO), and the UOO (Unknown/Unidentified Orbiting Object), which had been seen above the Tatra Mountains, and the rest of Poland. I am still interested in the strange disappearances and deaths of tourists going to the mountains. I investigated 36 of such cases.

Most of them took place in the Czerwone Wierchy peaks and Mt. Rysy. The tourists got lost in Tatra or were killed by unknown forces--perhaps the UFOs. The Tatra Mountains have been penetrated by people since the 15th Century and there were a lot of strange incidents and accidents among the white and grey rocks of those mountains. Polish TV made a film about three most interesting UFO cases in the Tatra Mountains: The NL/CE2 case of January 17, 1979, the CE2/DD incident of September, 1957, and the AN-24 passenger plane crash in the Babia Gora Range on April 2, 1969, where 51 persons were killed. By the way, there were three other plane crashes in the Tatra and Podhale Re-

GDANSK SYMPOSIUM CONTINUED

gion: the Sokol helicopter on August 11, 1994, the Mi-24 helicopter on July 10, 1997, and Pirat SP-3130 glider on November 17, 1976. All of them had very unpleasant meetings with the IUFOs, which ended very badly for the Polish citizens.

The same problems were shown by the next lecturer, Mr. Jaroslaw "Fox" Krzyzanowski of Legnica Kontakt Ufological Club in Legnica. He presented his lecture, giving the initial results of the Project Sudetes. He said that there is a close connection between UFO activity and the Great Flood which occurred in July, 1997 in the Lower Silesia Region. He detailed the connection between UFO activity and the state of the Earth's environment, he said. They are interested in that and they monitor our ecological state periodically. He had probed many UFO sightings in the region of Mt. Sniezka and Kowarski Grzbiet range.

In those places, the uranium mines have been exploited since the 19th Century. The Karkonosze Mts. were also the V-2 test areas during World War Two. Also during the war, the Germans established a special training center for soldiers, who would be used in the Arctic and Antarctic areas to conquer them for the Third Reich. Nazi scientists wanted to build the A or even the H-bomb and set up atomic material stocks there. That attracted the interest of the UFOs and the intelligence behind them, he said. The final report of Project Sudetes will be published in 1998.

Krzysztof Drozd of the Lublin Branch of the Cracovian UFO Research Group lectured about sightings in the Lublin and other "Eastern Wall" provinces of Poland. He noted that some UFO sightings could be explained by Russian/Soviet spy activity and their atomic tests in the Ukraine, where in the 1960s and early 1970s, almost 30 atomic devices there were detonated. He stated that this could explain UFO activity on the borders with the Ukraine and Byelorussia. It is another bit of evidence that the UFOs are interested in our atomic tests.

An announcer from "Radio Zet". Robert Bernatowicz, who did a series of programs called "Nautilus Radio Zet", talked about the Polish Army and its ufological interests. It collects all the possible artifacts from UFOs and USOs. This is secret and at the present time, no one knows whether the General Staff of the Polish Army acts on orders from Washington or the SHAPE HQ in Brussels, Belgium. Moreover, he states that 90 percent of the world's scientists are "scientific mediocrities" who want to stifle the truth about UFOs.

At the end of his speech, he warned people that there might be a great cataclysm in 1999--at a distance of 10 Astronomical Units. Another catastrophe might be caused by the asteroid Tantalos in 1998, when it will be only at a distance of 14 AU. The UFO activity perhaps is stimulated by the possible impact of the asteroid, which according to the Bernatowicz speech, could strike the Earth 20 km from Odessa in the Ukraine.

Ms. Sofia Piepiorka ("Eleanora") is more optimistic than Mr. Bernatowicz. In her lecture, she informed us about her research into the allés stones in Gdansk Province--in the Odry and Wesiory sites. The sites are called by her the "Polish Stonehenge", which attracts not only people but the UFOs as well. She stated that the "Great Purification" will start from these sites at the beginning of the Aquarian Age in 2025, when the Pisces Age will end. She is a private investigator of UFOs and megalithic stones, who lives in Gdynia.

Bronislaw Rzepecki, editor of the quarterly magazine, CZAS UFO, told people about two UFO crashes: the one in Gdynia Harbor in 1959 and the other one in Wegorzewo on March 15, 1996. In both cases, the places were searched and surrounded by the Army. In the Gdynia case, the living body from the wreckage was taken to the hospital, where the creature died. In the Wegorzewo case, we have no information about the fate of the crew of the smashed UFO.

GDANSK SYMPOSIUM CONCLUDED

Dr. Milos Jesensky of the UFO Centrum in Kosice (Slovakia) stated that Slovakia is very interested in the Ancient Astronaut theory, because there are a lot of strange artifacts, whose presence can not be explained in an ordinary way. Dr. Jesensky said about four of them: the Moon Cave in Byelanske Tatra Mtns., which had been discovered by Slovakian guerillas during the Slovakian Uprising in 1944; the footprints carved in the limestone rock near Martin--the footprints were aged 50-55 million years; the radio artifact at Kosice--a metallic box containing uranium or plutonium ore or pure metal; and almost 30 big--three meters in diameter--sandstone balls in Kysuce Province in northern Slovakia. They are the biggest stone balls in the whole world.

Gabor Tarcali of the Hungarian UFO Research Federation (and CUFORN Correspondent) in Debrecen, spoke about UFO sightings in the Hungarian Fusta region, where people often see UFOs in the shape of a ball of light and experienced close encounters with them, too. Mr. Tarcali told the story of the authentic artifact, which had been given by aliens to one of the Debrecen inhabitants--the magnesium rod. His lecture was illustrated by slides and videotapes of UFOs and the magnesium rod's owner's statement.

Typical of the similarity of the Polish, Slovakian and Hungarian cases occurred in the small village of Olsztyn kolo Czestochowy. On November 7, 1996, a UFO landed. The UFO left several half-ring shaped traces, where the grass is almost 3 to 4 times taller than in the area beyond the half-rings. When we thought that it was a really unique thing, we were immediately disappointed by Mr. Tarcali, who told us that similar traces had been found after CE2 and CE3 cases in Hungary and Romania. We visited one place on October 11, 1997. The traces were still visible on the smooth, grassy surface.

After the Symposium ended at 8.00 p.m., the lecturers went to the Gdynia TTK TV Center to take part in the press conference. It lasted until 11.30 p.m. After that, we went to the place where in February, 1959, a strange creature had been found by soldiers at the foot of Mt. Kamienna Gora.

During the "small ufological summit" in Jordanow, held on October 13, 1997, Mr. and Mrs. Tarcali, Dr. Jesensky and Mr. and Mrs. Lesniakiewicz decided to see the artifact in Slovakia in 1998. They also decided to meet at the 6th Middle-European Ufological Congress in Kosice, in the last week-end of November, 1997.

LEVULAR OPERATION OF SOME "GRAY" GROUPS OF VISITORS

by Kehl McMillan, B.Sc. , Mech. Eng.

The carnal body lasts for 300 years. The being does not identify with its carnal body. There are surplus carnal bodies for rent. The natural body may live for 1, 500 years, some may reach 3, 000. The natural body may inhabit other carnal beings at times.

The heliospiral body lasts for over 200 trillion years. The next body is immortal. The stated life of the heliospiral body is an expression only. For the heliospiral body "time", as we know it, is very different. The number of years given is apparent to the being, but not to outside observers. The "length" of life to outside observers is theoretical.

THE THREE SEXES

One sex duplicates a carnal body. The second sex duplicates a natural body. The finer third sex creates a heliospiral body. The three sexes join together. The materiality of the natural body is so fine that it permeates, is dissolved in, and saturates the carnal body and modifies the form of the carnal body. The heliospiral body has a materiality so much finer that it permeates both the natural body and the carnal body and modifies them. The final modification determines the sexuality of the new "angel". There are many names for these three bodies, one set of names is "solid", "air", and "vibrational".

GROWTH Special Controlled Conditions NUTRITION

Controlled rationing is the norm. Each body, the carnal, the natural, and the heliospiral requires three levels of food per body, each in accord with the materiality of each body. For the carnal the classifications are solid and liquid food, air mixtures, and various strata of sensory vibrations. It is the same scheme for the natural body, except that the matter is much finer, in league with the aurora borealis. The highest body, the heliospiral, feeds on orders of materiality which are usually spoken of as immaterial. Internally, by the highest form of metabolism, the carnal body helps to feed the natural body, especially when young, and the natural body in turn helps to feed the heliospiral body.

GESTATION

When a fetal carnal body is at a certain stage ready to accept the two higher bodies, the three sexes feel the attraction to come together to meld the three new bodies. An alteration and a accommodation occurs in the new "angel" which determines the total physiology in the matter of which sex the new being shall be. The new being comes knowingly aware of all the being of its ancestors. The new being is

LEVULAR OPERATION CONTINUED

born awake and all beings in its world protect it from sleep.

BIRTHING

The passive carnal being gives birth, and this carnal birth contains a natural body and the higher active heliospiral body.

SPEED OF MENTATION OF SOME GRAY GROUPS

A fully developed grayngel has eight separate cognitive brains working knowing in balance with each brain performing the particular functions laid out for that brain; however, various functions can substitute for other functions in an emergency, or when there is a temporary shortage of the particular "fuel" needed for the operation of a certain brain.

Each brain is given a name, with your understanding that the actuality is far more complicated than the name. Each brain is given a range of numbers denoting the relative speed of operation. The lowest speed is one. One is the given speed number of the formatic function, for the purposes of this paper. All other speeds are related to the basic slow speed of the formatic function, which formatic function is a small part of the intellectual brain outlined below as brain 5E.

Brain 1A, the medulic spinal brain, its relative speed is 27,000. This brain has, as have the other brains, many functions. The principal one is a multi-divisional locomotion function, which is divided into three parts each with their own memory system. It is intended to outline the operation of these three parts at the

end of the brain listing because this division is common to all the brains, including further divisions into groups of three for each of the principal divisions.

Brain 2B, the neutralizing brain for steering of brain 1A and brain 3C; its relative speed is 94,000. Among its many functions, brain 2B has a capability of fine sensory impressions. Some other functions of brain 2B are: preserving, amelioration, procreation, providing direction and a driving force. We shall note here that all the brains have their own sensory apparatus which when working together give a completer view of the "world" than just one or two sensory sets in operation.

Brain 3C, the all systems connective brain, its relative speed is from 30,000 to 400,000 depending on which of its functions is active at the time. Brain 3C organizes and controls the internal operations such as: various fluidic circulations, main fluid connection betwixt the carnal and the natural bodies, anabolic and metabolic processes including the first stage structurizing of nutrients for the natural and heliospiral bodies, expedient automatic external carnal actions, all carnal senses for ether spectrum, air spectrum, chemical spectrum, vibrational spectrum and pain-pressure spectrum.

Brain 4D, the solar emosensitive brain, its relative speed is close to 20,000 at the least and runs up to nearly 150,000. This complex group of functions includes a visual cortex which organizes associative and memory data into visible classifications at a relative speed of 30,000 compared to brain 5E running at rate 3. A further function of brain 4D is to assist in the co-relative generation of higher energies by means of transforming carnal foods, air, and impressions into compounds used by the natural

LEVULAR OPERATION CONCLUDED

body. Brain 4D also acts a cognitive connective link to both the natural and heliospiral bodies.

Brain 5E, the carnal primary intellectual brain, runs at speeds from a low of 1 for the formatic function to a speed of 3 for verbalized work both internal and external. The inside construct folds of brain 5E run up to speeds of 50, 000. One of the important functions of brain 5E is to implement reception and transmittal of intelligent emanations which connect with influences at galactic "distances".

Before continuing with the remaining three brains it will be useful to outline the basic divisions of the first five brains, knowing that this is only the first series of divisions. A very complicated chart would be necessary to show all the major divisions.

Brains 1A, 3C, and 5E are each divided into positive and negative, but for each brain the positivity and the negativity is different.

Brain 2B has no negative part.

Brain 4D has a very small negative part.

Brains 1A, 2B, 3C, and 4D are each divided into three layers which run with different intensities: the automatic layer, the driving layer and the cognitive or intellectual effort layer.

Brain 5E is divided into four layers, the automatic layer, the driving or imitative layer, the forced intellectual layer, and the formatic at the slowest layer.

We now continue with the outline of the remaining three brains. There are few words in our language which can be used to adequately describe these brains without leading the reader astray, therefore we are brief.

Brain 6F, the higher solar brain, has a relative speed of 40,000 up to 800,000,000. Brain 6F is a cognitive generator, has higher connective functions. Descriptions of its functionings might fill a few volumes. It is assumed that this brain has no negative part. This brain is the brain of the natural body.

Brain 7G, the star brain, has a relative speed of 500,000 going upward to 15,000,000,000. This brain oversees geometrical signature functions and "thinks" in these figures. It has no negative part. The reason for the overlapping speed is to enable cascading communication between the various brains to take place. Brain 7G is the brain of the heliospiral body.

Brain 8H, higher functioning of this brain is not known by the writer, and the speed is assumed to be ONE at the next series of dimensions.

Some people have assumed that some "grayngels" are looking for genetic materiality to confer brain 8H upon themselves and thus achieve a kind of immortality within the confines of a certain galactic grouping.

Each brain has its own memory system. Lower brains are unable to reach into the memory of a higher brain. Lower brains may obtain a "shadow" of a memory of a higher brain.

In the next article it is intended to try to relate human mentation to the "grayngel" mentation.

The foregoing has been gleaned from a few older books, from 400 to 6000 years old, and the data has been compiled by George David Carol.

HUMAVIEACAL MENTATION

by Kehl McMillan, B. Sc. , Mech. Eng.

Human mentation is similar to related multi-brained beings rather like the grayngels. Laws being the same everywhere, all humanoids have to conform to these laws at their level of current creation which must at this time, for humans, be part of the sensory film of life for this particular planet. It must conform to the basic want of Terra's triple system of one core with an overgrown moon, and a much smaller moonlet. These moons plus the other planets in this twin-star sun system show a need for a basic triple-brained being. One of these brains is split in three, making five brains in all. The remaining three brains are buried in the human genetic material for use and development many ages hence, if the possibility of further planetary evolution may take place. The sun system here is called twin because of Jupiter.

(Editor's NOTE: "Grayngels" are the writer's term for the grays)

BRAINAL DESIGNATION AND RELATIVE SPEED OF MENTATION FOR HUMANS

It must be pointed out that there are two types of humans, the weomen, and the yeomen. These are the twin sexes. Both their brain structures and their mentation differ in the intensity of some of their brainitic functions. Weomen and yeomen combine their resources to form completer humans. In maturity they learn to balance their different intensities. Large differences exist betwixt races but for this paper these will be overlooked. Grayngels have their differences too. Differences between separate human personages are far greater than any differences betwixt races in any case.

The same designation for the brains shall be

used as was used in GDC's paper on the GRAYS, that is 1A, 2B, 3C, 4D, and 5E as a basic set, and 6F, 7G, and 8H, as rare possibilities in a few select humans.

Brain 1A is the motor brain. Although it is diffused throughout and in every cell and sub-cell-part, it is centered in the spinal column. Its relative speed is greater than 30,000. This brain is split up into three parts; brain 2B, outlined below and centered in the lower spinal cord, and brain 3C, outlined below and having its nerves extending all over the place especially into the colon. These three brains, 1A, 2B, and 3C, operate on the same level and at approximately the same speed, and they form a balanced independent triad which is able to exist with a certain degree of independence similar to the lower animals found in Terra. Brain 1A, taken separately after the main split, is again split into three parts, each of which is again split into three. Here we are dealing only with the first of these splits. We shall describe them as separate functions designated as brainitic-function 1A1, 1A2, and 1A3.

Brain function 1A1 governs all automatic and previously learned muscle carnal motor actions which have become automatic.

Brain function 1A2 drives the impulses to action governed by likes and dislikes. This function houses the sensory organs of brain 1A, not used except in well developed martial arts personages and in well developed "athletes". The word athletes is in quotes because the driving push in most athletes comes from brain 4D instead of the correct function 1A2. Correct actions originating in a 1A2 function sometimes occur in great emergencies and, of course, by an effort of will. Brain 1A is sometimes referred to as the willing brain.

Brain function 1A3 is the seat of the intellect of

HUMAVIEACAL CONTINUED

brain 1A. It comes into play by effort and will. This is where learning of actions takes place for the most part and where learning of expedient actions can be done by imitation and by visualization through an effort of will. This function is used to create an advance patterning of motion even if the patterns are not performed. Here we mention the plus and minus forces in brain 1A, as in "joy" of moving and "resistance" to moving. Tension and relaxation are controllable factors. Dreaming and daydreaming from the memories of brain 1A are attributes of this brain 1A, due to a lack of control allowed by humans in general.

Brain 2B is the most powerful in the triplex of brains 1A, 2B, and 3C. In the human, this brain rules, and is responsible for at least sixty-four percent of all human activity. This brain has no minus part in it and all actions are either positive, that is "pleasant", or neutral or "nothing". A significant number of humans, however, find that the plus of this brain's urges are "unpleasant". Again, as in brain 1A, this 2B brain is triply divided into functions 2B1, 2B2, and 2B3. Before going into the operation of these functions, it is necessary to state the two main functions of the total brain 2B which are (1) procreation and (2) the manufacture of one third of the substances needed to supply tissue to brain 6F so that it is able to become active in a few humans. This new brain 6F-corpa combo is known as the kestirastralymph corporealis.

Brain function 2B1 is the automatic part. Control of this part is done in part through brain 4D; not normal, but necessary in humans. Most of the substance processing is accomplished by the work of function 2B1.

Brain function 2B2 acts as the main neutralizing force for the triplex brain system 1A, 2B, and 3C. It acts to mollify the work of brains 1A and 3C which rotate between the active and passive states. Another of brain function 2B2 capabilities is a system of very fast and fine sets of sensory impression mod-

ules. Most humans are dimly aware of this but some highly refined "artists" are acutely aware of many of these finer impressions and are able to portray the results in various media.

Brain function 2B3 acts as the intelligent connecting link-up between brain 4D, and, when pushed to the limit of its relative speed, between brain 6F. Brain function 2B3 seldom works very well in humans because the energy for its operation is habitually stolen by brain 5E. This is the reason why we have not been able to entirely assess all its facets in the total brain hierarchy.

Brain 3C is the physical body internal functions control and operating brain, also spoken of as the autonomic-instinctive nervous system. Its relative speed varies from 30,000 up to and beyond 250,000. The reflex activity is the only external control this brain has. This brain 3C is also divided into three main functioning complexes which we shall call 3C1, 3C2, and 3C3. Brain 3C also has two divisions throughout, a minus side and a plus side. We leave it for your observations to see aspects of the operations of the two sides.

Function 3C1 is once more an automatic operating function seeing after the fluidic circulations, the digestion, and all the totally wonderful convolutions from growth and glands to microscopic cellular structures and complex energy transformations, including the distribution of *saxæ*. Many books are available on this subject.

Function 3C2 takes care of pleasure and pain. It looks after the lymph circulation as it regards the connection between the physical body and a possible kestirastralymph corporealis. It also controls the sensory organs of this brain 3C which are bodily sensation, touch, pain, heat, cold, balance, hearing, eyesight, smell, taste, and a few other inside sensations. The organs of these senses are standard to the extent that they are interplanetary in scope. Several papers are available on this subject including one

HUMAVIEACAL CONTINUED

from a well known commercial photographic house. Function 3C2 is one of the entry passages into the inner consciousness where intense pleasure is felt and where the black and green universal written language may be viewed; the latter in conjunction with brain function 3C3. When further splits of each function are considered the relative speed increases 27,000 fold. For example, a life span of some genetic syringes, which are smaller than somatids, is three seconds in length, which for them is a thousand years.

Function 3C3 is the intellectual part of brain 3C. Although this brain function is also divisible by three we shall deal just with an overall picture. 3C3 is the learning function. It deals with emergencies, with invaders. It tries to impart its knowledge to the rest of the organism but with little success for most humans who, by and large, lack REASON. Only in Terra-animals who lack brain 5E does it operate instructively. There are exceptions of course, and these experimenters have tried and are trying to assist the other adamkin humanoids to be much more aware of their carnal body's operating instructions. One very important main function of 3C3 is to take part in the creation of the second third of the substances necessary to give higher flesh to brain 6F.

Brain 4D is the essential brain for adamkin, that is, if it is working properly, which, in most cases, it is not. Here we shall describe proper functioning of brain 4D. Consequently, you may not recognize it as part of your functioning. Brain 4D is the "horse" of the carnal body; it is the driving force. It is everywhere at once, in every cell, but it has as its centre the human solar plexus. Its relative speed is 30,000 up to more than 100,000, but, in special cases, the speed may be temporarily raised to 810,000,000 for seconds only. Brain 4D is divided into three parts designated as 4D1, 4D2, and 4D3. These functions shall be given separate treatment. Brain 4D is split into positive and negative parts but the negative part is very wee and, in a properly arranged adamkin, the negative part is used, as it were, as a car

horn. In the disarranged adamkin, fortunately not many, the positive part may become as negative, with consequences not to be mentioned here, but, about which every novel is filled and human history abounds with the lurid stories.

Brain function 4D1 is the automatic feeling function. It works well if it is trained. A trained 4D1 is very rare; less than one percent have even a rudimentary training.

Brainitic function 4D2 is the function which operates as the ascendant in level-two adamkin as a substitute for brain 5E. This function, when it is running correctly, and if it receives the necessary shocks, acts as the creator of part of the final third of the higher transformation of carnal solids, air, and sensory vibrations into the finest material to flesh out brain 6F. Function 4D2 is much more active in weomen than in yeomen, to the extent that it is almost the only controller in many weomen, rather than brain 5E which is more or less dormant in them. The converse is the case in most yeomen, therefore, progress in growth may be measured by the balancing of these two functions 5E and 4D2. There are other 4D2 functions:

(1) a visual cortex very like the grayngels', which handles info-memories by organizing them by classifications with a relative speed 10,000 times faster than brain 5E:

(2) a set of sense organs, which includes "the big ear", located at the bottom end of the solar plexus, "the big eye" used for remote viewing, an advance "time" sense, both audio and visual, and "the big touch" which makes a contact with other sentient beings:

(3) the definite solid vibratory sensation during the transformation of materials for brain 6F which is very much the same as a cat's purr, and, in advanced adamkin, in touch with natural functions, this purring is continuous.

HUMAVIEACAL CONTINUED

Brainitic function 4D3 is the higher logic function of "the horse", the commanding force for brain 1A. Function 4D3 is, in turn, told what to do by brains 2B (mostly) and 5E. The intelligence of 4D3 is far reaching. It confers acting ability. This is the function which enables the very great actors to break legs. By the effort-force of attention brain 4D3 is a cognitive connecting link to both brain 6F and brain 7G, of course the energy for such link-ups must be available. These link-ups make it possible to experience things in "shadow"; things which might be shown when we speak about brains 6F and 7G; things like energy threads, rain where there is no rain, snow flying upwards where there is no snow, and communicative hand sensations with coloured light sparks. With linkage to a certain extent with brain 6F an adamkin may, too, experience shades of some of the fifty-four higher emotions, may experience non-distance betwixt people, and may experience communication through the fingers.

Before starting on the next brain 5E we should point out that precious few adamkin could be found to have most of their functions functioning in the right way. Thus, we ought to mention, as we go along, some various shortfalls in the average adamkin. Brain 5E is supposed to be the high driver of brains 1A (which includes 2B and 3C), and 4D. Instead, it has become the whipping boy at the low end of the totem pole for the least of the other brains and has given itself over to hypnotic somnambulism and continuous daydreaming. Brain 5E runs at speeds of 1 and 3. Higher speeds occur when coupled with other brains. Brain 5E is everywhere in the carnality but with its centre in the skull. At the same time, it is divided vertically in two, twice over, and horizontally divided in three with an extra part tacked on below. The triple divisionality is again divided into three, which we won't go into here. Let us start with the first vertical division, remembering that this split is also in all the parts and functions of this brain. The split is more pronounced in the adamkin than it is in the grayngel. The first split divides everything into yes and no, into positive and negative,

into active and passive, and into plus and minus. For each part of the triplexity the positive and the negative have different meanings. The second vertical split can be said to carry through all the lower brains as well; one side is totally false and the other side wholly real. They don't communicate. The real side knows all of the false side, but the false side knows very little of the real side. Let us deal now with the triple split and the little lower ganglion. We will number these functions 5E1, 5E2, 5E3, and 5E0.

Brain function 5E0 is the lowest and slowest with a speed of 1, and it is known as the verbal forming reporting function. It counts up to two or yes and no. It says, "that is red" "that is green" "the sky is orange" "the book is on the table". Funky 5E0 is suitable for working routing charts based on choices, as in "yes or no". Unfortunately for adamkin, function 5E0 is the only one in brain 5E that works, except in adamkin children, certainly, before the other functions have been educated out of them. In all the samples we have collected, questioned, and examined aboard ship, only the children yet had their pure native logic in brain 5E. Oh, there were others, but in every case they'd had their functions educated back into them, not perfectly, of course, but "good enough" for them. 5E0 answers all questions, even if the answer is unknown, instead of letting the other functions of brain 5E scratch their heads.

Brain function 5E1 with a speed of 3 is the motor mechanical automatic part of brain 5E. If it were working, it would be engaged in mechanical automatic verbalized "thinking". We should stick to what should be in brain 5E. 5E1 does all that heavy mechanical work of readin' 'ritein' an' 'rithmatic with no attention at all, and precious little retention. Function 5E1 is brim full of automatic associative sentences, pictures, roles, attitudes, and idle daydreaming. Function 5E1 should always be at work, ready with preprepared answers and routines already worked out by function 5E3.

HUMAVIEACAL CONTINUED

Brain function 5E2 works when it likes, when it is interested in some-thing, when something attracts its attention, and when it's pleasantly curious. It thinks. It's perfectly logical. It's born that way in some adamkin, but not all. This is the function of high acting, role playing, and the captain of the good ship logic. Any one with this function at work is a "fair haired boy". Brain function 5E2 in the second division has a set of working sense organs. There's no sensation coming through these organs, but there are thoughts, as objects, coming from inside and from outside and, in the extreme, from very far away, from planets, and from stars. When this function is working correctly it knows where the thoughts are coming from. One has to be astute and very aware to know where these thoughts and influences originate, so as to be able to deal with them and not to obey or believe every thought that comes into the head. Some thoughts "zing", others are grandmother's old song. One has to be free to question every thought that comes into one's head. Often the thought that one believes as one's very own is just a whisper that one has half heard the day before. It pays to stay awake. Brain 5E is supposed to be in control of the horse and carriage. Besides receiving the various spectra of influences, function 5E2 transmits. This two way radiator is done through the hair. At times, function 5E2 has a surplus of energy, in which case, the energy is discharged by fast spasms which adamkin call "laughter". This laughter may be induced in adamkin when brain 5E is presented with two irresolvable data-bits, and since it has a yes half and a no half, a Ping-Pong effect shoots out the power which has no where to be used in constructive consideration. Grayngels don't laugh because their "I" resides in their higher brains 6F and 7G which do not have a negative part. "We're from the stars, stern, eh?"

Before we begin our dissertation on brain function 5E3, there are items which need clarification. Remember: "The second vertical split can be said to carry through all the lower brains as well; one side is totally false and the other side wholly real. They

don't communicate. The real side knows all of the false side, but the false side knows very little of the real side." This aspect goes just a wee bit deeper. It is often stated that we paralyze people and that we cause their memory of us to be hidden. We don't do that to people. They do it to themselves. When we meet them, we draw out the real side. Now, if the real side has never learned to move, then, when the poor chap tries to move, he is frozen, or he struggles and it's like moving through glue. When we're with him his personality knows nothing of it at all, but his real essential self knows everything all too well. Then later, when we are no longer in his ken, his false ego returns, and his real self, having no truck, at all, with his personality, stays mum; so he doesn't recall the details. It's not our fault.

Brainitic function 5E3 is the highest form of intellect. It is able to operate non-verbally. It comes into play through effort, attention, and consciousness, if the latter word can be applied to adamkin humanoids. We refer to adamkin sometimes, to be specific, since in Terra there are other roots from other spheres besides Adam. We have not been able to set a definitive relative speed for brain function 5E3 because it runs all over the map depending on effort, but let's say that the top speed is 6. When 5E3 is in contact with other brains in the system, memory is created, even permanent photographic memory. It is function 5E3 which is able to be above language and so it is able to create language from a high thinking non-verbal level. Your history has many events as such if you were able to see them. We shan't list them here. Brain function 5E3 is a most sensitive apparatus, lending itself to messages which try to get through from brains 6F and 7G channeled through functions from brain 4D which can be in contact with brains 6F and 7G. For those who lack the means and the training of expression it can be frustrating to have such visions of such fine art pictures or hear such fine music or envision such fine dancing. Function 5E3 is the seat of REASON. . . . designs, shades of pure ideas. . . . with effort, the mind is full. This is the

HUMAVIEACAL CONTINUED

mind, the cattle rancher, the driver and the animal keeper, or so it should be. This is the mind of clear vivid thought. This is the mind that can comment on the highest visions when having them. This is the mind of avacolithishvara, of the caterpillar mind who has viewed the butterfly. This is the mind who seeks a master greater than he, this is the mind who is able to abandon all thoughts. This is the mind which can remember itself. Brain function 5E3, when it is working, controls all the other brains and itself. We never found a case. Brain function 5E3 is the highest development permitted today in human-kind, in Terra; higher development is a possibility for a very few who "want" it. The reason why "want" is in quotation marks is that the word want and the word desire apply only to the lower brains. The high brains 6F and 7G do not have desire. Thus they cannot transmit an urge or a desire to coat the higher brains into consciousness. That is why people don't want them. That is why the world does not want them. That is why the world does not urge them nor help them. In brains 6F and 7G there is love instead of desire, REASON about it, eh? All of which brings us to the finest thing about brainitic function 5E3 which is that, by a special construction of its thoughts, it is able to arrive at the start of the transformation of the materials needed to flesh out brains 6F and 7G. The initial transformations occur in 4D2 and can be felt by sensation.

Brain 6F is the higher solar brain, and has a relative speed of 40,000 and on up to 800,000,000. I dare not compartmentalize it because it is ONE. It is unity. It is the big I. It is continuous pleasure. Even its pain is pleasure compared to the lower brains, if comparison is even possible. It has no negative part. It always says yes. Its god is brain 7G who can override 6F's miracles with its own 7G miracles. The sensory organs of brain 6F give a much more complete view of the world than all the other lower senses put together. This is the brain of the kestralymp corporealis. To all the lower brains 1A, 2B, 3C, 4D, and 5E, brain 6F is the master; it tells

the driver where to go with horse and carriage. Brain 6F has 88 modes of pleasure, each one of them equal to the one big orgiastic pleasure of brainitic function 2B2. The true real solid higher emotions are enjoyed by the conscious functioning of brain 6F; that is, the three big popular emotions and their off-shoots plus others unheard of. If brain 6F has been properly fleshed out, then its highly complex sensory organs come into play; all the organs which are experienced through brainitic function 3C2 are there, but at a very high level; colours are felt, even colours which 3C2 cannot experience and this goes for the other senses as well. What is experienced by the organs of brain 6F has been told about in many a book, so read, if you will. Brain 6F is able to receive flashes from brain 7G and one of the flashes confers the understanding that we do not move, that nothing is moving, and that there is no distance.

Brain 7G, known as the mental brain, is cogently like the graynel star brain having a relative speed of 500,000 to 15,000,000,000. The speeds may be lowered temporarily to make carnal contact with brain 1A. This brain oversees geometrical signatures, and mentates with these designs which visually appear as thin coloured lines, as straight as the light of a laser; and they move. Do they ever move? When viewing things in themselves these signatures tell all. Brain 7G has no negative parts. When fleshed out, brain 7G is the core of the spirimental corpa of the standard adamkin as well as many other humanitids. Experiences inside brain 7G are beyond anything ordinarily conceived by brain 5E, meaning that brain 7G is beyond logic, as in a vision of twin jumping peacocks passing one another while going at the same speed. Another aspect of the REASON and UNITY of brain 7G is stated as, "everything is the same thing". One experiential vision in brain 7G illustrating this fact is the experience of some pure opposites taken together, listed here as follows:- the identity of the highest possible pleasure and pain which is pain beyond any concept; the identity of the highest light, and the oppressive darkness, total all encompassing real darkness; the

HUMAVIEACAL CONCLUDED

great-est possible intensity of sound, being identical with the deepest un-imaginable silence. The same is for motion and stillness, the greatest infinity of motion, and stillness which is stillness indeed, and these and maybe more, and all of them the very same thing and all of this during the greatest possible clarity of thought; then with all of this being totally able to switch back and forth, at any time, to experience any part of any pair, pain included. We go on from here to that clear light going to infinity in all directions; being able to see the light in all directions at once; yes, all directions. Pleasure? Yes. Why not? Yes, levels of permanent continuous pleasure. Why not? It is all there at a whim wish and whisper. Yes, levels, many levels. Brain 7G having become higher flesh, is the sweet partaker of total objectivity and all the knowledge and understanding possible for a typical Earth-Terrasian triple-main-brained planetary being. One mode of expression of the new or old en-7G-brained spirimental corpa is the dance. By lowering speed to 30,000, 7G enters into 1A and expresses itself in the dance. For a contact to be possible during a dance or poses, the dancer must be able to do the positions precisely; the speed of the poses, and the rhythms must be right, and the dancers must be in the correct brain, 1A, not 5E. Even if there is no spirimental corpa, brain 7F transmits knowledge to certain strong and well prepared people through the dance: martial art masters, school-dancers, sacred dancers, temple dancers, mandala dancers, mad mandala dancers, as sometimes a contact is made without the proper preparation, in

which case madness and/or fits occur, and well trained dancers of some ancient traditional dances of so-called very primitive tribes-people, often done in secret. As to the latter, we have been able to speak to the primitives on a common ground, without fear, paralysis, or forgetfulness. We can speak with simple people who are evolving and pure children. Others who "think" they are going somewhere are impossible. There are other modes of brain 7G expression which are, in short: painting: calligraphy: music: poetry: sculpture as in Lohans and Zeus.

Brain 8H is one big mystery as to how it became incorporated into Adam and some lizards who have even more of IT than adamkin. Brain 8H is an absolute, named the cause of all and itself, too, and when fleshed it is immortal. High brain 8H is able to see, be, in any triple set of the six periodic dimensions. The speed is such that a slice through time makes the whole of all the bodies stand stock still, almost frozen in time; there is my Terra, my footstool, rotating, and as each ley-line passes my awareness, there's a word of my ten sound mantra spoken below the fear, where I am above the fear. In total knowing objectivity I am, with all the knowledge possible for mankind, and with this, all the ability to do anything under the sun.

The foregoing has been compiled from questionings and experiments while aboard ship by Kehl McMillan.

COL. CORSO DEAD AT 85

Retired U.S. Army Colonel Philip J. Corso died in hospital in late July, 1998. He had recently suffered a heart attack. He was the author of the breakthrough book, "The Day After Roswell". The book had reached number 12 on the New York Times Book List of best-selling books in the United States. All of ufology and, in fact, the entire world has been impacted by the revelations in his book. CUFORN's Directors urge everyone to buy the book.
