

The Dead-Sea 3.5.2004

Offir, a citizen of Jerusalem, an air force veteran, drove with his son, 14 years old, from south to north.

Suddenly, they observed 3 reddish lights, flying at an enormous speed, no more than 100 meters above the sea level. To his estimate, they crossed the total length of the red sea in one second and a half. Offer estimates, that their speed was a lot higher than a jet plane. Offir says: "at least 7 Mach". After observing this, they parked next to the road, along with more drivers, who also saw the object. Together, they saw a lighted object, bigger than a star, and "at least twice bigger than the north-star". The lighted object turned off after 10 minutes. Afterwards, it was seen in another location in the sky. It was located there for 2 minutes, and then it turned off and appeared again, in the location it was seen in the first time.

This cycle happened a few times – turning off and on – in different locations in the sky. When they continued driving to Jerusalem, the object was still visible.

Offer and his son called the mother, while continuing their observation at the white object. She called and reported about the observation at 22:00. 15 minutes afterwards, I spoke with Offir (Abi Greif), who excitedly tolled me this report. According to the mother, the son was also very agitated from this experience.

Tel-Aviv 9.5.2004

Elisha Gilad reports: it happened at 20:40, while driving in south direction at a road near the sea. In front of me, in a higher altitude than plane flight, I observed 2 lights – like yellow fireworks, directed towards Jaffa and fixed in the sky. It was something shining, brilliant, dazzling and strange. It seemed to be like the 2 lights were connected together to a rod. Then I saw a third light turns on, between the 2 lights, in a very bright and shiny yellow color.

I started the observation from the Sheraton Hotel direction, and observed it for 5 minutes. Finally, everything just disappeared. It was located approximately, in the area next to "Jerusalem coast", towards the sea and high in the sky. It was something very unnatural.

Arava road 13.6.2004

Liat, 20 years old, from Rishon Le-Zion, traveled along with 4 people in a vehicle, to north direction. Everyone, except the driver, were sleeping. After midnight, the driver noticed a strange object in the sky and woke all of us. It happened in the road section before Arad. We saw a white object, blinking in the sky and 3 times bigger than a star. Liat says: "it was very prominent, different from a star. It seems that its cycling around it self".

When they stopped the car, they noticed the object is fixed in the sky. More cars stopped, after seeing the object. Some of the viewers called the police, but the police didn't come. The UFO was located east of the road.

When they continued traveling north, they saw the object for more haf an hour. Liat says: "it was something amazing".

Kfar-Ha'im 19.7.2004

The settlement is located in the north of the Sharon area. Nir, in his 30th reports, that around 21:45, for about 10 minutes, he observed an unusual view in the sky. Nir, who is accustomed to observe the sky, noticed at first, at a reddish light "like planet Mars", moving slowly from north to south.

Through his binoculars (30x50), he saw that the object was assembled from 3 lights in a rectangular shape, colored red, yellow and white. It was very quiet, and no sound was heard. The lights weren't blinking, and were located very high in the sky. To Nirs' estimate, the UFO flew above the coast line.

Na'alle 21.7.2004

Hanoch Nevo reports: At 10:20 I saw something from east to north. These were white “blinking lights”, high in the sky. There were 3 lights, flying one after the other. Then I saw 2 more lights, flying from east to west, also one after the other. One light, of the first 3, was located in a distance and the two other lights flew in a closer formation. I observed them for only a few seconds.

It was very unusual to see 3 lights and two additional lights, flying from different directions.

Kfar-Saba 21.7.2004

Sara Maizlik reports: When I went out to my garden, at 20:45, and looked up to the sky, I saw something blinking, next to the moon. First I thought it an airplane, but I noticed there are 2 more blinking objects. I still thought these are planes.

It was located west to my location, and the objects flew in north direction. Later I noticed, they came closer one each other and created a rectangular form, very high in the sky. I saw them for about 10 minutes. Their color was white. Afterwards, they disappeared one after the other.
