

Kiriati-Bialik 28.4.2003

Mark Gelman reports, that at 21:00, he observed a blue object, moving from south to north-west, in a vertical course, for approximately 2 seconds. To his estimate, it was a big object.

Modiin 30.4.2003

Hanoch Nevo reports: "At 20:30 I saw an UFO flying towards Jerusalem. In the beginning, I saw it above my house, and also my children saw it. It was in the size of a medium star. It flew to north-east direction in twice an airplane speed. Using 50x20 binoculars, it seems to be like a shiny light dot. It flew in airplane altitude. Its color was white-orange, and had a stable light. The observation lasted approximately 5 minutes."

Geha Road, Rishon-Le'Zion 16.5.2003

It happened at the night of our last meeting ("The Israeli UFO's research center"). Hanoch Nevo returned to his home at Modiin, and in the way back, he entered to a fuel station. It happened in Geha Road, in Ariel direction. "At 12:30, I saw 3 white shining fixed lights. When I returned from Kefar-Saba direction, I couldn't see them anymore. The lights were located in an airplane flight height, in a linear formation and diagonal downwards"

Yaniv, 18.5 years old from Rishon-Le'Zion reports, that starting at midnight, he observed 3 fixed linear lights in the sky. After 2 of them turned off, he succeeded to grab his video camera and videotape the last light, before it also turned off. He claims that the lights suddenly appeared in the sky. Yaniv was with 6 of his friends, who also saw the white-bluish lights. The right light, seemed like getting away from the others, and then returned back. The lights turned off in an order, beginning with the left one, then the middle one, then the one in the right. The lights were bigger than a star and observed for approximately 4 minutes. He filmed them, standing next to an electric pole, so that he could use it as a relative point.

Rishon-Le'Zion 17.5.2003

Yaniv reports, that at 23:10, he saw high in the sky 3 yellow lights. He says: "I saw them for approximately 3 minutes. They flew in Tel-Aviv direction. At the beginning, one of the lights turned off, then the second, then the third. I succeeded to photograph only one of the lights.

Jaffa 13.6.2003

Shimon Sheszian reports: I was at work. Approximately at 02:45 I saw a star colored object, flying fast upwards, from south to north. The observation lasted a few seconds, and then it disappeared. It was located at a very high altitude.

Ma'alot 15.6.2003

In that morning, Shimon Rosenberg discovered new marks on his leg. He reports: "I don't know if there is a connection, but 8 days after the observation on Pentecost (15.6), in the morning – I went to the bathroom to take a bath. To my surprise, I noticed a sign on the back of my right leg, similar to the sign that appeared on my hand in October 2002 (a rectangular shape, but without the central dot).

This time, I don't remember any unusual event during the night, and I didn't dream about anything."

In the photo taken a day after (16.6), we can see dots, creating a rectangular shape. The distance between the dots is approximately 1.5 cm. The base of the triangle is turned towards the fingers.

"I didn't feel anything and it didn't bother me", says Shimon, "The wounds were still seen on the 22.6, but it's interesting, that the color of the skin inside the triangle area, seemed to become darker, comparing to the color of the normal skin."

After 2 more days, the wounds fell off, but the remarks were still there.

Modiin 17.6.2003

Hanoch Nevo reports, that at 20:50, he saw a medium-size yellow, star shape light, in the sky. The object moved slowly, and it was followed by 2 airplane blinking lights. The airplanes flew west, to Jaffa area. Then he says: I observed the yellow light with binoculars, and discovered that it wasn't one light, but 3 separate white lights, in a rectangular shape, and with a red light in the center of the formation.

Kerem Maharal 26.6.2003

Gil Vinshtein reports: I took part in a social event, took place in the west part of the Moshav (cooperative Israeli settlement- H.S.), with some friends. The area surrounding the place is mountainous.

Approximately at 01:30, I stood with my friend Paniel, discussing about aliens.

We could see a lot of vehicle lights in the mountain roads. Afterwards, when it became dark, we observed dots of light in the mountain area. Afterwards, a huge light beam appeared from the earth up to the sky. It moved from side to side for about half a minute. Then we noticed a red light in the sky, crossing the Moshav area, from south to north, for about half a minute.

After half an hour, approximately at 02:00, I saw again a red dot of light, crossing the area, and this time really low. We called our friends, but until they come, it disappeared.

Paniel, who lives in Moshav Tsruffa, reports: "We observed the mountain and saw there dots of red, blue or orange lights. Afterwards, a big, wide, spotlight beam came out from the mountain area, extending more and more, and moving from side to side. I saw also an orange dot of moving light".

The two witnesses added, that in the moment the light beam appeared, the chickens in the Moshav, started to crow. When the beam disappeared, they became quiet.

Tel-Aviv 27.6.2003

Bar, 13.5 years old, who his observations reported also in journal No. 35, reports: I woke up in a way I don't understand. I heard a voice "Hallo" strong and continuously. I want to emphasize, that I don't wake up at night even from a TV sound. In the beginning, I thought that my parrots are to blame, but this was different. I watched the window, and saw there a yellow-white light. Inside the house everything was dark. I looked again at the window, but the light disappeared.

I had some previous experiences. When I was 8 years old, I walked with my father and brother at "Napoleon Mountain" garden in Ramat-Gan. I went next to a bush, and saw a part of a head with 2 shiny eyes. I called my father and brother, but they didn't respond and went on waking.

A year and a half ago, together with my brother and a friend of my father, we saw in day light, a gray-back object, flying in the sky. It flew to the right and left, and had the shape of a saucer turning diagonally.

2 months before the above observation, in March 2000, I saw something like a flying saucer. When I observed it through my binoculars, I felt like "I'm here and the aliens are inside this thing"

Ma'a lot 29.6.2003

Shimon Rosenberg reports: Me and my young son (14 years old) sat in the yard front of our house and observed the sky. Meanwhile explanations about the "Big Dipper", between 20:55 to 20:57, a strong white light appeared high above us in the sky, between the stars. Its general direction was north-north-east. Meanwhile its light became dimmer, until it disappeared. The observation lasted 3-4 seconds.

The light of the object was shining bright white. When it got dim, it turned to yellow-orange.

Ma'a lot 30.6.2003

Shimon Rosenberg reports: From 20:40 to 21:00, I observed an object, flying far away, high in the sky, from east-south to east. In the telescope it seemed to be a bright white light with an undeclared halo. Most of the time, I observed the object through the telescope. A neighbor standing next to me, declared it was an airplane, because he saw red blinking lights. I couldn't see these lights through the telescope. When the object arrived almost above my apartment, it changed its direction and went to north-north-west.

8 neighbors saw the object. I asked my wife to bring me my video camera, so I will be able to videotape it. Meanwhile, I lost the object. My neighbor declared that the apartment hides it. I run with my camera, but I wasn't able to focus on it.

The observation lasted approximately 20-30 seconds.

My neighbors were very enthusiastic. There were 8 witnesses with me, and later on, my wife joined with my video camera, after she also saw the object. At 21:30, everyone returned to their homes. I continued to observe. Exactly at 22:00, a smaller object appeared – very high in the sky, with yellow-orange color. It moved from north-west to south-east, with twice of the speed comparing to the object observed at 21:00. The distance between the 2 observations in the sky, was approximately 30.00 cm (when holding a ruler with an extended hand). The object was very high, because it seemed to be very small, also in the telescope. I succeeded to observe it for 2-3 seconds on the telescope. The whole observation lasted for 5 to 7 seconds.

Ma'a lot 6-7.7.2003

Shimon Rosenberg reports: at 6.6 (Saturday and Pentecost) I sat, at 21:00, at the entrance to my house. Suddenly, I observed a shining object, high above me in the sky. The object was star-shaped (and its color was like small star, dull white-blue). The object moved slowly in the sky from south to north. The observation lasted approximately 20-30 seconds, between 21:00 to 21:06.

This observation was surprising, so I didn't have my telescope with me.

The following day, I was prepared from 20:30, with my telescope.

Between 20:50 to 21:10 I saw nothing. I decided to wait for some more minutes. To my surprise, at 21:15, I saw the same star-like object crossing the sky. I followed it with my telescope, and to my opinion it was located very high. I could see with my telescope that its color is shining white. The observation lasted 15-20 seconds. My wife and a neighbor were with me, and they also saw the object. It moved in twice speed comparing to the object I saw yesterday (6.6).

I must mention, that even though I was ready and "waited" to see it, I noticed it at the last minute (this time it flew from south-west to north-east).

Ma'a lot 13.7.2003

Shimon Rosenberg reports: I went out smoking at 21:00. As I do usually, I looked up to the sky. To my surprise, I saw an orange light, blinking, and moving slowly without noise. For a moment, I was astonished, because I never saw such a view above my house. Immediately, I asked to bring me my video camera. I started to film, but without any success, because of the automatic zoom. Afterwards, I succeed to see 3 lights, ordered in a rectangular shape, blinking together. All the view continued approximately 15-20 minutes. Because of my shouting, my neighbor came out. Today he is a pensioner, but in the fifties, he was a Russian air force man, and served on a strategic bomber. He knows about my interest in UFO's and he is also is enthusiastic of my observations.

Meanwhile, another neighbor arrived with his wife, and brought binoculars. All of us saw the object moving slowly and disappears quietly south-east direction.

After 15 minutes, 2 jet planes appeared, exactly where we saw the object spinning and blinking. We could observe, for sure, that the jets were looking for something. They flew around and around, first in small circles and afterwards in bigger circles – but always at the same area.

Here, I must mention, that before the arrival of the jets, a big orange light appeared moving fast, high in the sky, from south-east to north-west. I wasn't able to see it clearly in my telescope, but my neighbor with the binoculars said that it was something round. The ject cycled the area for about 15 minutes, and then left.

The neighborhood became quiet and then my younger son shouted “dad, it's behind you!”. When I looked in the other direction, north-west, I observed again the orange blinking light. At this moment I was able to videotape it successfully. In the video, we see 3 lights – white, orange, green – blinking constantly, and the whole object is turning or turning over. We can see in the video that occasionally, there are 2 lights, and occasionally there are 4 lights. Unfortunately, at 22:00 the battery in my camera became empty.

To my opinion, the object seemed to be thin and not too wide, because its rolling-over was immediate. I want to mention again, this object moved or flew slowly and for a short time hovered and then moved again.

From my knowledge of aircrafts and different airplanes, there isn't an airplane that flies so slowly without any noise. At these hours, the surrounding it is very quiet at my place, and any minimal sound is heard (also a humming sound) – but this object flew without any sound or noise at all.

This object was, to my opinion, smaller then an airplane
