"THE ALIENS REVEALED" MANCHESTER CONFERENCE

Members of the PRA group attended the UFO conference sponsored by the "Independent UFO Network" at the University of Manchester UMIST building on Saturday 25th April.

The speakers were George D. Fawcett (USA), John Macnish (TV Producer), Jenny Randles, the well known author and researcher and Dr. Jacques Vallee, the world famous UFO researcher and author.

Before the conference began, visitors had the opportunity to look over the numerous stalls selling the latest UFO books and logo 'T shirts'. Business was brisk and Jacques Vallee was hard pressed signing copies of his latest book "Revelations". Among the visitors was well known circle photographer 'Busty' Taylor, who chatted to George D. Fawcett (see photo). There was also the opportunity for your editor to meet John Macnish for the first time and to discuss the Crop Circle subject and to speculate on what might be in store for us in a few weeks time! John Macnish has expressed his wish to film the PRA microwave detector "Microdet" in action. He will have a helicopter standing by during the coming "season" for any eventuality.

PRA member Ken Potts arrived with his video camera and duly recorded the conference speakers in action. Gary Stapleton (PRA) attended what was his first UFO conference and was suitably impressed. He spent his time meeting new acquaintances and discussing a variety of subjects.

GEORGE D. FAWCETT gave a talk on his past experiences and discussed some of the well known UFO cases. He certainly seemed to be well briefed, he spoke about beams of light that shot out from UFO and were used as a weapon system of some kind. It seems that the USA are not all that far behind in their own technology, as George mentioned the USA have lethal light wave weapons that you can't see and sound wave weapons that you cannot hear, but can kill you! It appears that laser technology is well advanced also, but that is another story. He also quoted the story about the parking attendant in the USA that saw a UFO attempting to land and promptly fired a number of shots at it (which bounced off). He believes, that like people on Earth., there are good and bad guys' in the UFO craft.

JOHN MACNISH representing the media, spoke specifically about Crop Circles and showed video shots taken by army undercover units operating at night in sensitive Crop Circle areas. The strange glowing light seen hovering over a Wiltshire field is still unidentified and remains a complete mystery. As does the small shining object filmed by two German students as it flew low over a wheatfield at Alton Barnes last year. John Macnish explained how as a complete sceptic, he started filming Crop Circles in 1989 for "Daytime Live" TV.

He went on to disclose that the crew, who were about to film Pat Delgado and Colin Andrews in a Crop Circle, suddenly encountered problems with their camera. Then shortly afterwards the sound engineer picked up interference on Pat Delgado's radio mic'. Whatever it was, produced a very strong electro-magnetic interference on Pat Delgado's transmitter.

Then the sound recordist tried various means of improving the signal, but it was only when Pat Delgado moved to a different area in the circle, that the sound disappeared. The sound was heard again, when the crew moved to a new circle and began their filming again. The sound recordist received a lot of "stick" for not being able to clear the noise and it was only later when the technical staff at the BBC studios studied the recording the answer emerged...it was almost certainly a beam of concentrated microwaves!

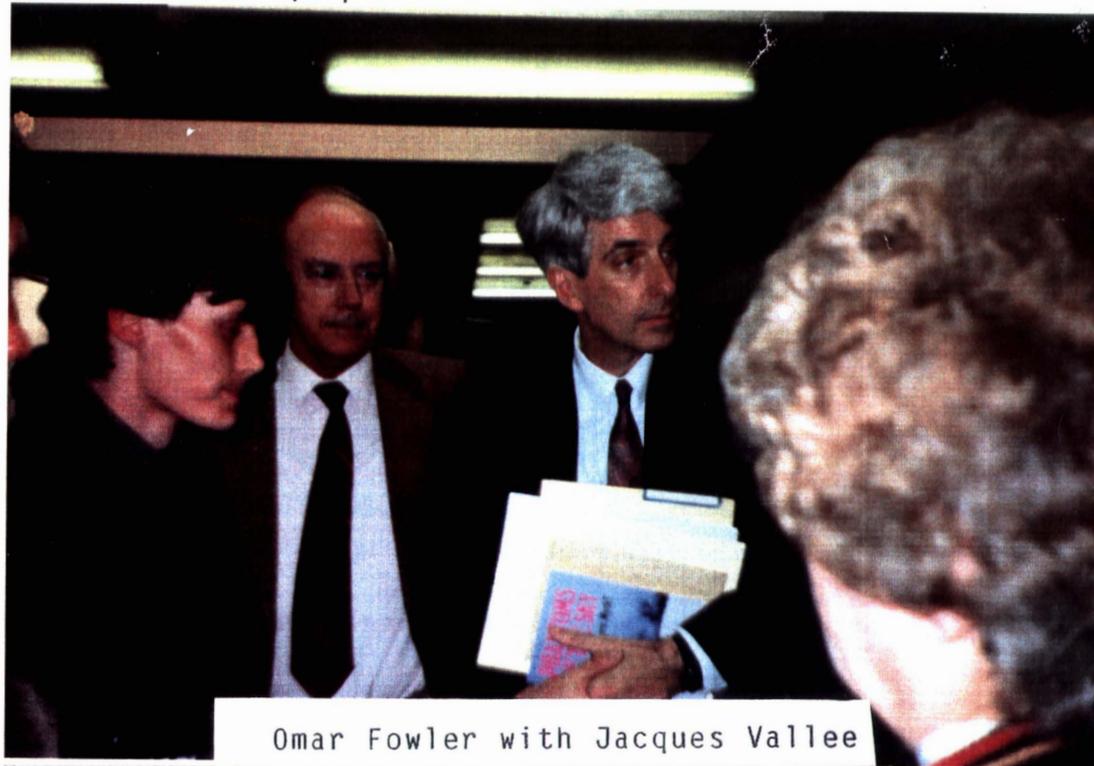

JENNY RANGLES, the well known author and broadcaster, spoke on the UFO phenomena. The difficulty of analysing the evidence, when the sightings were open to so much mis-interpretation. There were numerous examples of witnesses seeing identifiable objects, such as high flying aircraft, satellites, weather balloons and becoming confused in their interpretation. The number of hoaxes were very few, approx.1%, but there were likely to be more examples of this in fake photographs than witness reports.

Jenny quoted a figure as high as 95% of all UFO reports as really being IFO's, the mis-interpretation of known flying objects. Nine out of ten UFO investigation reports should give an identifiable object as the reason for the sighting, "if they are not, then they are doing something wrong", she quoted. Obviously there is something going on, as 5%, although it doesn't sound an awful lot, soon mounts up week after week and year after year. There are also a lot of cases from all over the world that are never reported and the total could amount to a great number.

The scientific fraternity tend to phoo-phoo the UFO subject, although the subject is crying out for scientific study. If we do not study the unknown, then we never learn. Although the study of the subject appears to have made little progress over the last forty years, we have gone a long way to establish what it isn't and what it is! It is the one single answer that UFO investigators are looking for and yet doesn't exist, because there are many different phenomena existing under the umbrella title of "UFO".

Dr.JACQUES VALLEE a former principle UFO investigator for the American Department of Defence, well known author and world wide researcher. He served as a real life model for the French scientific investigator in Steven Spielberg's film "Close Encounters Of The Third Kind".

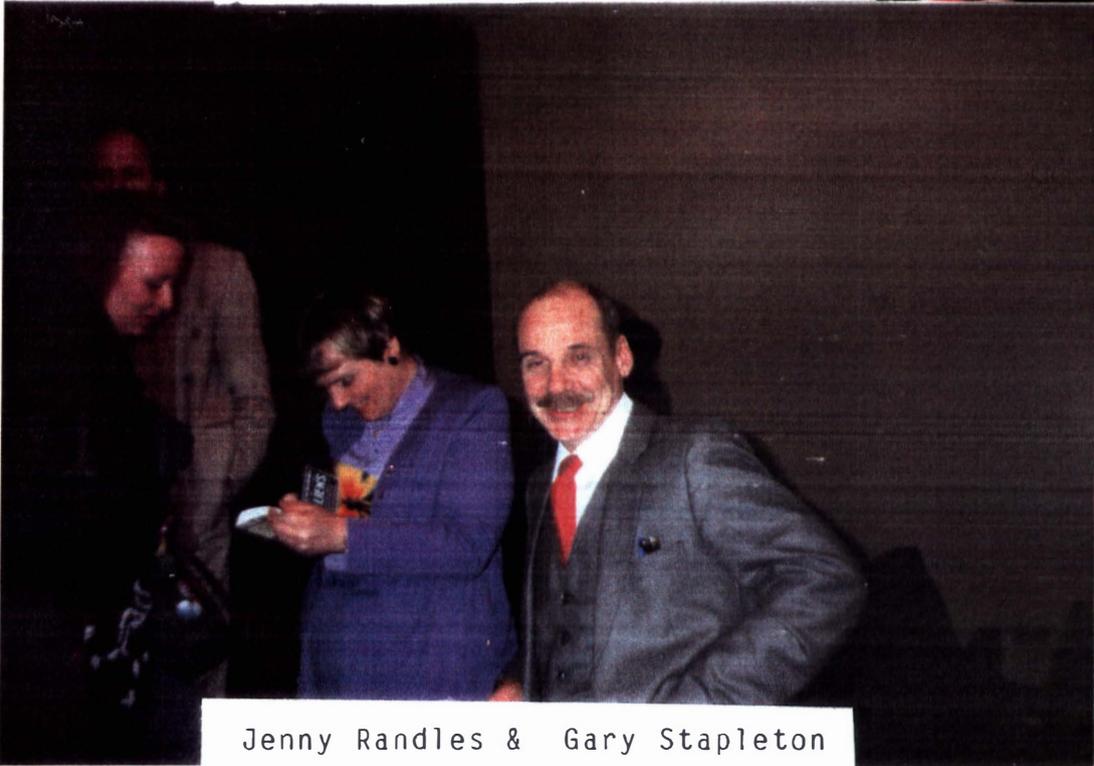

Jacques Vallee started by referring to "getting back to basics", as we tend to lose sight of the problem that we are trying to solve. First he began by discussing cases of physical contact and proceeded to show slides of various UFO incidents. Jacques Vallee was critical of the lack of interest shown by the scientific community. It was one thing to blame the Air Force for censorship, which did exist, but the scientific community should also share the blame for their failure to study the numerous well documented incidents. **(Owing to lack of space the report must be terminated here, but it is hoped to show an edited video of the talk at a future PRA meeting)**

UFO OVER THE M1?

An eighteen year old couple reported seeing an "Adamski" type UFO over the M1 motorway between junction 26 & 25 on the night of Saturday 11th of April this year. Alwyn the driver comes from South Normanton and Johanne from Sandiacre.

It was at approx. 1155pm, when Alwyn and Johanne were driving southwards between junction 26 and 25 on the M1 motorway. That night visibility was quite good, there was no sign of fog or mist and they were proceeding at a normal pace. Both witnesses commented that they had spotted the double light in the night sky individually and it was only after a few minutes that they mentioned it to each other almost simultaneously.

The lights seemed to be approaching them and as there was little traffic around at the time, Alwyn slowed down and the couple peered out of the windows intently, studying what now appeared to be a dark shape with two bright lights in front. They then pulled over to the hard shoulder of the motorway and watched the object as it moved across the sky. They described as moving silently and although it was night and there are yellow sodium lights alongside the motorway at that point, they were able to describe its shape.

The object was soon out of sight and the couple continued their journey. They both made independent sketches when they arrived home (reproduced below): This incident is still under investigation.

Another sighting of a bright fast moving light, which may be connected with the above, was made by Alan Hitchcock of Chaddesden, Derby. Alan described how he had seen a fast moving light to the East of Chaddesden at 10.55pm and believed to be on the same night.

(The matter of costs restricts us from showing Alan's sketches and calculations....space is limited)

The brilliant white light (1/8" at arms length), travelled at an estimated speed of over 2,800mph according to Alan's calculations:- He noted the direction of travel, which was in the direction of the M1, noted the time taken to travel a set distance. His home is 47,520ft from the M1 and the angle in the sky was approx. 13degrees, this shows that the object was at a height of 10,970ft (presuming it was over the M1). He estimated that it covered 4,157' in one second, thus producing a speed of 2,834mph at a height of approx. 11,000ft.....Well done Alan.

SIGN WAVES AND ENERGY PATTERNS

By Jeff Whitear

Back in 1987, when looking at the maze at Saffron Walden, Essex, I noticed that if this pattern was used as a rotating coil, it would produce three "sign" waves (see diagrams on next page).

Looking at the maze pattern, as I see it, it could produce: (1) Sign waves
(2) Alternate flows of energy within the circles and four separate segments

Taking the star sign wave, this is created by the opposite flow of energy to that of the rotation of the coil. The three loop wave has not been detected as far as I know, but may be responsible for the triangular shaped crop formation. The eight loop wave, when plotted, will not synchronize after one cycle so will create a fifteen loop wave if left to continue. I do feel that there could be a use for this type of energy.

TALE ENDERS

We are indebted to Mr Russell Stannard for permission to reproduce his excellent aerial photograph of the huge circle at Woodford Northants. (See last page). All circles were swirled clockwise, the whole formation was a little under 340' across, although the outer ring was quite ragged. Within the wide ring, there were still some stems standing .

The SUN, Monday 27th April 92. UFO BUZZES PILOTS: Two pilots claimed that their Boeing 737 was buzzed by a UFO as it prepared to land at Gatwick Airport (Surrey). The "black lozenge-like object" missed a wing of the passenger jet by only 30', in an incident that took place "last summer".

Omar Fowler took part in the morning chat show with Graham Knight on BBC Radio Derby 14th May. Graham was intrigued with the PRA discovery of microwave action in Crop Circles and he treated his listeners to the sound of the "Microdet" 'bleeping' as it detected the radiation from his monitor screen.

Dr Jacques Vallee, described as "very interesting", the PRA work on microwaves in Crop Circles. He was also impressed with the "Microdet" microwave detector invented by Paul Foster and has ordered one for his personal use!

The PRA group is in urgent need of a colour TV (24") for showing videos at group meetings (Loan or purchase). Exterior condition not important, a nominal sum could be paid.(Contact Omar Fowler if you can assist)

NEXT MEETING

Will be held at the Stanley Club, Stanley Common, Nr. Ilkeston. Derbys. on Wednesday 20th May at 8pm. A "Ghosts" talk by Mark Hayward (Scientific UFO Research Association) & A review of the John Macnish Crop Circle video "Cropcircle Communique". (Non-members welcome)

Owing to the high costs involved in our microwave research, it has become necessary to increase the meeting charge to £1.00.
