

DECEMBER 1972.

SOUTH Lincs U.F.O. STUDY

GROUP NEWSLETTER. (No. 44)

CAN EVERYONE SEE UFOS? Patricia Barnes.

A discussion at the Open Meeting on September 16th.

Some cases to set you thinking:

1) Miss CAM., a spiritualist, saw a disc shaped Ufo while she was eating lunch. The disc rose vertically at great speed & made no sound. Miss M. pointed the disc out to her companions BUT they failed to see it even though it was in view for 1 minute. She is convinced that it was no vision but definitely a FS; a round object, silver in colour & under intelligent control.

2) On the same day & time, so probably the same Ufo seen by Miss Cam, (a midday, end of September '69), a housewife spotted a Ufo pulsating in the sky & rising vertically. She watched it for 1/2 minute. She pointed it out to her son, who could not see it. This housewife is a person of psychic ability.

3) Miss. Barbara Lewis while a passenger in a car in High St., Cheltenham saw high up in the sky a large, golden, elliptical object. Above it a similar but smaller object. Around the larger disc were 6 golden orbs emitting different colour rays. This was seen for 4 minutes. The following day while walking in Hereford, Mrs. Lewis again saw the same thing high in the sky. The day after this travelling in a car at Wolverhampton she saw it for the third time, but much lower. This same week at Uttoxeter an Alcester housewife was terrified by a glowing object in the sky which seemed to follow her down the street. It was lower than a plane, white & emitting rays. Her husband & at least 5 neighbours saw it. This object was in view for about 1 hour. Returning to Mrs. Lewis - 4 days later sitting in a car in Birmingham she saw the object clearly & as low as the rooftops, a very brilliant light shone from it. About 100 people passed the car as they left a nearby church & coloured rays from the orbs played on them, but they saw nothing. The final sighting happened 6 days later, while Mrs. Lewis stood outside Woking station. This time the object was higher in the sky & seen for 2 minutes.

Mrs. Lewis states that these sightings were not seen physically but by extra sensory perception, the inner eye. She believes that all ufo sightings are seen like this & none seen with the physical eye. Mrs. O'Shea then related her sighting of last year, a brilliantly coloured object over Baston church tower which apparently no one else saw.

A wide ranging discussion followed. General conclusions drawn from this:

- a) Some Ufos can be seen by everyone.
 - b) People who are psychic can perhaps see Ufos not visible to others.
 - c) People often see what they want to see, eg your mind may not be able to accept the Ufo, rejects it & so you don't see it. Alternatively your mind may alter the Ufo so that you see something acceptable such as an ordinary aircraft.

UFO s Ultra or Extra-Terrestrial? David Johnson.

One of the most popular notions which the Ufo sceptic loves to put forward in attack of the extra-terrestrial hypothesis, is the idea that the vast interstellar distances involved are so fantastic that it would seem to be an impossibility that our planet could be visited by an alien culture. But what distances? To say that these distances are so fantastic, is to overlook the fact that up to the present time, we don't know where the Ufo phenomenon originates from.

It has become increasingly apparent over the last few years, that the Ufo enigma involves much more than the seemingly obvious idea of extra-terrestrial space ships. In his book 'Operation Trogan Horse', John Keel sets out to illustrate the apparent parapsychical nature of the phenomenon under study and theorises that the Ufo phenomenon is 'Ultra-terrestrial' rather than extra-terrestrial, that it exists alongside us and always has done.

He puts forward the suggestion that the phenomenon originates from another space-time continuum (dimension) which is invisible to us, yet coincides with our own reality or existence.

If we can see something and touch it, we say that it is real, it exists, but in actual fact we may be viewing only a tiny part of the whole universe. It is feasible that there may exist, many more dimensions of reality of which we are totally unaware yet have always co-existed with our own world. Keel believes that the Ufo phenomenon is a manifestation of a higher intelligence which possesses the ability to manipulate physical matter to an almost unbelievable degree and take on whatever form it desires. These range from glowing discs and globes to goblins, angels, fairies, monsters and a host of other entities, but none of these manifestations is its true nature. It is Keel's view that the phenomenon has deliberately confused us for centuries and mislead us into believing that our planet was being visited by an extra-terrestrial intelligence from outer-space. The phenomenon has taken on the form of objects which we have misinterpreted as spaceships, and has cleverly and craftily disguised its true nature and purpose in being here. What that purpose is can only be guessed. The majority of Ufo students, after careful study of the evidence have swallowed the idea of visitors from outer-space, without considering the total amount of evidence. It is only after a careful study of the phenomenon as a whole, including the apparent hoaxes, contacts etc., that the ultra-terrestrial nature can be realised.

Many students who are supporters of the ET theory, have concluded that the scores of electro-magnetic (EM) incidents in which automobiles have been mysteriously brought to an halt on lone highways, offer some evidence that the passengers are being scientifically studied by superior beings from other worlds. I have wondered if this is the case, why incidents of this nature continue to occur. Surely if intelligences from outer-space have been conducting scientific investigations of Ufo witnesses, it would be natural to presume that

with their superior intellect they must already know enough about us. But yet these electromagnetic cases continue to crop up, time and time again.

As Keel points out, we seem to have been visited by hundreds of different objects of infinite shape, size, colour etc. Is it really natural to assume that an alien culture or cultures are utilising hundreds of different types of space-craft? There hardly appear to be any two cases in which the object or objects are identical. Indeed it seems that nearly every object sighted is different in size, shape, colour etc. Are we to believe that these Ufos are really the product of superior intelligences from some other planet or planets in the universe?

Most of Keel's theories apply to the 'soft' sightings, and we must never ignore the possibility that some of the sightings, especially the 'hard' variety are space-craft from elsewhere in the Universe. One fact seems to stand out above everything else. The Ufo phenomenon seems to be first and foremost concerned with the Human Race, in what way we do not know, but it is evident that the phenomenon possesses fantastic abilities. From the evidence collected, it appears that the Ufo can amongst other things: halt automobiles, cure physical ailments, heal wounds, and produce a vast range of physical effects on witnesses. For years and years seemingly stable individuals have been relating unbelievable experiences and it would seem that we are being affected by a phenomenon which at the present time, the Human Race cannot entirely comprehend. As Charles Bowen states in 'The Humanoids' "Something is coming from Somewhere". Where from and why, we just do not know with any certainty.

The Day The Sun Gave Us A Shock. Sunday Express. 3.9.72.

There has been a violent electric storm on the sun.

At its height the solar storm produced in one hour enough energy to keep the whole of America supplied with electricity for 100 million years.

The storm, which started on July 25, was the most intense solar eruption for almost a decade. Long before it could be detected by earth-bound instruments the storm was observed by America's unmanned Orbiting Solar Observatory, launched into space last autumn.

Later, other scientific satellites including 3 Explorers & 2 Pioneers sensed radiation from the outbreak.

Immediate warnings were flashed round the world that huge clouds of charged particles were expected to hit the atmosphere causing radio black-outs & interfering with power supply systems.

If you were abruptly cut-off in the middle of a long distance telephone call early last month you can be pretty sure the solar storm had something to do with it. American scientists say the storm clouds created gigantic waves in the earth's magnetic field and that the electrical energy reaching us was the highest ever recorded.

The Orbiting Solar Observatory enabled them to detect and photograph the storm - equivalent in ferocity to million of H-bombs exploding - almost as soon as it broke out.

What pleased the Americans is that OSO, as they call it for short, has proved its worth as an early warning device. It could be invaluable in detecting solar events and consequent radiation that might be dangerous to astronauts.
