

# THE STEADY SIGNAL Electromagnetics and Anomalies.

A newsheet for editors and authors.

February 1995 No.002.

## ITEM 1.

It was LINDA BROWN who telephoned me from Troon, Ayrshire, Scotland after receiving my number from PAUL DEVEREUX. This lady heads a local support group for the many cases of myalgic encephalomyelitis (M.E.) which have developed in her area. This group called **SEARCH ME**, has been investigated and contacted by leading figures in electromagnetic pollution study circles DR C.W.SMITH and ROGER COGHILL. High field levels have been measured in and around Troon due to a combination of local fault, military base and Prestwick Airport. Coghill has noted the repeated associations between EM hotspots and M.E. cases, and from my own investigations it would certainly appear that sufferers never fully recover from this post-viral fatigue syndrome due to the stress put on their physiology by environmental fields.

Our conversation began with aspects relating to M.E. and EM pollution, but I eventually sensed that she had something unspoken on her mind. She hesitantly mentioned that the local residents also suffer from "mental effects", and eventually, somewhat sheepishly told me "Well, we are getting aliens...", indicating cases of CE3/4.

This did not really come as a surprise to me, as I have maintained that the CE3/4 experience is basically a warning from the body via images from the unconscious, that its regulatory systems are under threat from EM pollution. However, this was welcome independent testimony from an environmental health support group.

LINDA BROWN and **SEARCH ME** can be contacted on: 0292-314070.

## ITEM 2.

There have been an increasing number of abductees appearing on television recently, and as they have voluntarily gone public, it gives me the chance to reveal the results of my own investigations.

ROSALIND REYNOLDS from Essex and TV veteran, lives beside an electrical substation and my field detector showed a strong electrical field in the top half of all of the rooms in her

house. Her back room was once used as a recording studio but was abandoned due to static interference. Major electrical event? (MEE) Ball lightning came down the chimney when she was 13 years old, and sailed round the room. Another MEE? Her encounter experience in Sudbury, Suffolk involved a ball of light beside a pylon, and during it she saw blue electrical discharges arcing up the pylon. Her boyfriend at the time, who was in the car with her, subsequently went mad, and tried to kill her on several occasions.

She suffers from light sensitivity (note her heavily tinted glasses) called **photophobia**, and her sinuses stream 24 hours a day. Clearly an allergic reaction to something; probably her numerous dogs, which she breeds. She is hypersensitive to domestic gas.

ROHAN HINTON from Dulwich, London lives in a block of flats where the rear garden area backs onto a powerful radio transmitting antenna attached to a radio-cab office, which zaps her flat at almost point blank range. Major electrical event? A few years ago she was close to a small tornado in Delaware, which she watched from a raised deck of the house she was staying in.

MARIA WARD from Greenhithe, Kent lives between two rows of high tension cables mounted on pylons, and her house has been surveyed by the local environmental health authority for EM fields. At Central TV, Birmingham, I asked her the 25 questions listed at the back of ALLERGIES AND ALIENS, (witnessed by BUFORA's John Spencer) and she answered in the affirmative to them all. Major electrical event? (MEE) In response to asking if she ever had balls of light appearing in the rooms of her house, she produced several photographs of just that. Electroforms?

KEN PHILLIPS, long term investigator for BUFORA sent a questionnaire based on the same 25 questions to many of the witnesses in his case files, and has been surprised at the affirmative results. For example he found that well-known abductee LINDA JONES of Manchester was close to a lightning strike when she was younger. Coincidentally, this was near the location of her encounter experience. He found that this was a pattern which repeated itself throughout his cases.

For example, TONY BURFIELD, CE3/4 percipient involved in his well-publicised "Quantock Horror" in Somerset, UK, wrote confirming his MEE-he had suffered a major electrocution accident earlier in his life, and nearly died. At the time of his encounter he lived close to a row of pylons and the encounter experience itself took place between two rows of

intersecting pylons about fifty meters away from where he lay in a field.

For a full analysis of this case, see THE LEY HUNTER, No.122.

December, 1994, available from: P.O. Box 92, Penzance, Cornwall, TR18 2BX. ENGLAND.

### **ITEM 3.**

As an example of the subjective nature of CE3/4 experiences, the MAUREEN PUDDY case in Australia is usually quoted. Investigators were actually present during her experience which she described as she lived through it; the investigators seeing nothing. However, I now have another. It involves a man investigated by MALCOLM ROBINSON of the SPI who was meditating whilst sitting in a chair in his lounge. He suddenly found himself inside what he could only identify as a flying saucer, and heard an alien telling him about the workings of the craft. He saw other humanoids sitting at what looked like computer consuls, and through the windows saw planets and the moon. After about ten minutes he snapped out of this state and found himself still in his armchair in his lounge. Like all other abductees, this man did not go anywhere.

I recently investigated an intriguing CE3 case, experienced by "IAN" of Peckham, London. This young man in his early 20's sees eight-foot tall humanoids of dazzling golden light slowly emerge from a wall of his room. They speak to him about his health and forbid him to eat junk food of any kind. They also showed a disturbing vision of him having a heart attack, and as a result, he bought an exercise bicycle. They told him that they are from another galaxy and that he must take care of his health as he has been chosen to represent them to the human race. Typically, IAN displays hypergraphia as an epileptiform symptom, and writes for six hours a day about the usual cosmological issues.

On asking which wall they emerge from, he indicated one with a window, overlooking the back gardens. On looking out of this window, I was surprised to see three RF antennae mounted on a sub-roof, about 30 feet away. His neighbour is a radio ham. In addition to being zapped at point-blank range by these, a full dosimetric field survey with a sophisticated field meter showed that the same wall emitted a strong electrical field of 106.50 watts per square metre! This is common in old houses where water in the plaster conducts a field from poorly insulated wiring. The headboard of his bed rests against this wall.

IAN is sometimes able to turn his video on simply by touching the casing, experiences the

sense of presence frequently, notices that his light bulbs last for a very short period, and when my tape recorder ground to a halt, said "That happens all the time". My field meter lit up when I held it near him, but did not with a visitor to his room.

#### **ITEM 4.**

Researcher NICHOLAS REITER in Gibsonburg, USA, as mentioned in TSS 001, carried out an experiment where he put simple magnetic field detectors into the homes of abductees. His results will hopefully, be published in the next NEW UFOLOGIST, but needless to say they support my prediction that such fields are instrumental in triggering the CE3/4 experience.

He has also developed a type of magnetic response test for abductees and experiencers of the paranormal. Using very strong magnets, he placed them on specific areas of their head and found that a range of unusual sensations were typically produced in such individuals, but not in non- experiencers. This of course supports my own findings, and it is clear that EH should stand for **electromagnetic** hypersensitivity as opposed the electrical hypersensitivity. Investigators, why not try it and let me know your results?

A summary of REITER's results will eventually appear in the NEW UFOLOGIST.

#### **ITEM 5.**

Conventional wisdom has it that radio frequency transmissions are invisible. However, after taking a photograph of a mobile phone relay pylon, I was surprised to find that two beams had registered on the photo. One appears to be aimed at an angle upwards from the microwave transmitter (to a telecommunications satellite?) and the other beams out at an angle towards a terrestrial location.

Have I caught a trans-Atlantic call in progress? It seems to be a rare example of a process called *heilingschein* where water droplets in the atmosphere become visible due to the refraction and diffraction of light in a magnetic field.

#### **ITEM 6.**

I have been advised by the police to have my phone disconnected for a while to deter threatening phone calls warning me not to speak at lectures or publish my findings. I feel justified therefore, in indulging in a little self-aggrandisement. JACQUES VALLEE wrote to me after reading ALLERGIES AND ALIENS to say: "*I was delighted and stunned at the elegance of your approach and somewhat peeved that I had not thought of it myself*".

Encouraging messages such as this are balanced out by insulting letters, and overall I have found that it is people who are investigators themselves, who have also carried out their own original research who recognise and support the aspects I outline.

The armchair snipers are numerous, and often seem to deliberately choose to misunderstand my approach, and claim that I say things I don't. I can honestly state that I have not received a single objection to my approach which I feel I cannot answer which threatens its basic premises. A round-up of the heartening and hilarious responses from around the world will be the subject of a subsequent article in the NEW UFOLOGIST.

#### **ITEM 7.**

My long-awaited book published by CASSELL/BLANDFORD will be out in March 1995. They have retitled it as: **UFOs-PSYCHIC CLOSE ENCOUNTERS - The Electromagnetic Indictment**. Readers must remember that it was written almost two years ago and is more speculative than **ALLERGIES AND ALIENS**. It includes the electromagnetic pollution aspects I have already presented, and its main thrust is to show the overlap between UFO entities and apparitions, embodied in what I have termed the **ELECTRO-STAGING HYPOTHESIS**. Reactions to **ALLERGIES AND ALIENS** have indicated that another book is needed to answer many of the questions raised relating to the more technical aspects. This I hope, will be: **ELECTROREALITY - Living with Electromagnetic Pollution**, and will accent health and such environmental effects as domestic electroforms, such as those which UK abductee **MARIA WARD** appears to have photographed.

However, the Blandford book does introduce a number of new concepts such as the **SIGNAL LINK** phenomenon. This is where the personal field emitted by EH individuals as an allergic reaction in hotspots, links through an overall ambient EM field with a distant atmospheric phenomenon (such as an earth light) as an electrical streamer through the atmosphere, similar to the upstroke of a lightning strike from earth to cloud. This, I argue, induces a personal and physical electromagnetic link between a LITS and the body/brain of the EH witness, and begins to explain why such BOLs appear to be aware of the witness, and react to them.

As evidence of this link, in one case there was an energetic earthing effect when the witness touched a metal door handle whilst watching an overhead UFO and was immediately struck by a laser-like beam from it which hit and burnt the hand touching the handle. This persisting injury was later photographed.

### **ITEM 8.**

I am in the process of applying to the **FUND FOR UFO RESEARCH** for funding to investigate the area around the **CRYSTAL PALACE RF** transmitter. This is one of the largest in the UK at **1000 kW**, and will if successful employ a team of paid investigators. Also, I hope to investigate residents below a kilometre of pylons as a second stage of the project. I will be asking for many thousands of dollars, much of which will be taken up with purchasing sophisticated RF field meters and microwave detectors.

This will be pioneering stuff indeed if it comes about, but I have heard ugly rumours to the effect that the FFUR only funds projects which further the ETH. If this is true, it will be a damning indictment of the scientific outlook of the FFUR. Watch this space for developments.

### **ITEM 9.**

A well researched chapter by ANNE SILK has appeared in the scientific arm of FORTEAN TIMES called FORTEAN STUDIES.(Vol.1 Dec'1994) It is entitled: **OPTICAL ILLUSIONS. A Brush with the Aliens.** In it she outlines the effects of non-ionising radiation on the human optical system, in particular showing how a structure called *Haidinger's Brush* is involved in the apprehension of polarised light. Under specific, but relatively common conditions, this structure is involved in the induction of the perception of a coloured form that many UK ufologists will recognise: the wraparound eyes of Hopkins' grey alien entity, or the "UFO" seen by witness ELSIE OAKENSEN. Many other insights also, and well worth a look.

**TSS is available from: Albert Budden, 17, Brook Road South, Brentford, Middlesex, TW8 ONN. ENGLAND.**

Cost: (unless exchanged)

U.K: £1.50 (i.e. Six first class stamps)

U.S: Two dollar bills
