## FIRE IN THE SKY

As mentioned in last month's newsletter, the motion picture about the Travis Walton abduction in November of 1975 is about to be released. The date of this theater release is March 12th. The TV ads should have already been seen by the time you read this. A press release has been enclosed for those state personnel who might want to use this event for PR purposes.

### CORRECTION

ALLIED ADVERTIZING, the agency promoting "Fire In The Sky", has its office in Cincinnati, Ohio, not Louisville, Kentucky. We appreciate their help in regard to the release of this important motion picture.

## OTHER UPCOMING MOVIES

Joan Didion and John Gregory Dunne have put together a script for "Zone Of Silence", a movie about the government UFO coverup.

Jacques Vallee's "Messengers Of Deception" is apparently in production.

"Fire In The Sky" is ready for March 12 release by Paramount.

Kevin Randle & Don Schmitt's book "UFO Crash At Roswell" is apparently in development with a "major playwright as screenwriter and a noted director" already on board.

(SOURCE: Items 1,2,4: ROUNDTOWN UFO SOCIETY. Ed: Item 3 updated. Rumour: Item 4 is supposed to be by Steven Spielberg and it has been confirmed that the TV production scheduled for this fall. Final script has been approved. A well-known actor will play the part of Jesse Marcel).

## ALIEN COMMAND STRUCTURE UPDATE - Bruno Molon

The data in the charts that I sent to you indicate a structure and purpose to the many UFO sizes and types reported over many years. Disc-shaped craft either oval or circular account for the vast majority sighted. These fall into specific size categories:

1) A 12-18 ft. disc or egg, usually with a two "man" crew. This vehicle is used for recon and brief landings for sample gathering purposes. It is not used for abductions.

2) A disc roughly 25-35 ft. in diameter, usually with a dome. This is used as an all-purpose lander. Sometimes it is used in abductions, but apparently due to lack of space and facilities these abductions are usually abbreviated. The cabin is usually open, but in the case of abductions, a walled-off room that opens to the outside of the craft is used. In such cases the abductee usually stays in the small examining room and is not taken to other parts of the craft. Dr. Jacobs points this out in his book.

3) The ubiquitous 70 ft. disc. This model resembles the smaller one above, but comes in a couple of different floor plans for different purposes. Observation craft of this size may or may not have an open cabin. This type is the one most commonly used in abductions. In this case the interior is sectioned off into rooms, usually in a ring pattern with a circular hallway running around the inside circumference. Rooms open into a central control area. The craft is usually accessed from the outside through a hatch which opens into an airlock, then into the hallway or one of the rooms.

4) A 100 ft. or larger craft which rarely lands. This is also used for abductions, including mass abduction, as the large size affords the room and facilities for an assembly line style mass abduction.

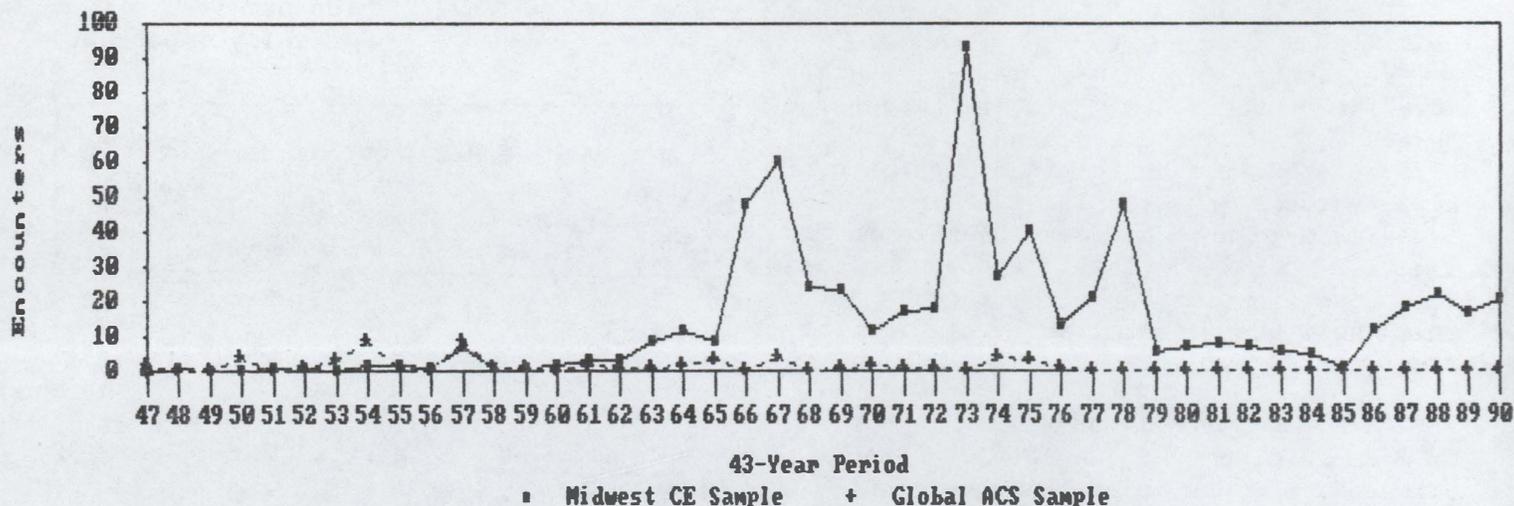

Notice the logic and purpose present in the various sizes and types presented in this dissertation on UFO morphology. Curiously, several different races may be

TL 789  
A2 04  
1993 March

observed operating the various craft. It is as if they all use the same motor pool.

## Comparison Study: Molon Data

Midwest Sample CE/Global ACS

### TYPO ERROR

The Air Force base mentioned on page three last month is Loring, located in Maine, not Minnesota. It is a SAC base with a heavy bomb wing. (SOURCE: Jim Delehanty) (Ed: My state abbreviation for Maine was MN, should have been ME).

### DO UFOS NEED LIGHTS?

This is something that has bugged me for a long time. A "covert" operation with objects lighted up for easy observation? Or well-lighted objects to attract attention in an "overt" operation for 50 years? Neither makes any sense. Do they need those lights? My conclusion is, NO. But I cannot explain what the purpose is, except for lighted areas on the craft that may have something to do with propulsion, such as corona discharge, etc. That the lighting is deliberate makes the most sense. Many may fly over and most observers would never give any thought to them being more than ordinary aircraft at night. A perfect disguise? So why the lights at all?

Willy Smith of the UNICAT Project provided me with a paper last year and I would like to present you with his conclusions without getting into the full report.

### UFOS DON'T NEED LIGHTS - Willy Smith, UNICAT PROJECT

From the very beginning one of the characteristics of unidentified flying objects has been the presence of lights, varying in color, intensity, shape and behavior. Those properties have been recorded ad nauseam in the literature, to the extent that for the general public the majority of UFOs are no more than mysterious lights moving in the sky.

However, no serious attempt has been made to assert the potential significance of those luminous manifestations. The purpose of this essay is--if I am allowed to pun--cast light on the matter.

Based on observational evidence it seems that UFO lights are not essential for their continued operation, although color changes at times are apparently connected with sudden maneuvers involving high accelerations.

The lights are not needed for navigation, since UFOs, like our more sophisticated aircraft, don't need to have visual contact with the environment, and manage quite well to avoid pursuers and obstacles. This leaves us with the alternative that the operators make use of those lights in order to be seen when such visibility suits their purposes, whatever that may be. This option is disturbing, as it apparently rules out the hypothesis of a rare but natural phenomenon, while shoring up the idea of nuts-and-bolts machines controlled by an intelligence.

Of course, one could do as the defenders of the psycho-sociological hypothesis who following the ideas of Monerie, conclude that since "les OVNI's n'existent pas" the correct line of action is to dismiss forthwith all the evidence used above as merely nonsense.

### ZOO EVENTS & NEAR MISSES

There have been a number of articles written lately about asteroids and near misses or "Earth grazers". I've relayed information that I felt was potentially important. Well, there's more. (Source: ARKANSAS MUFON NEWSLETTER, Issue #30) Current accounts of the flying rocks are considerably more detailed and widespread. Network news broadcasts carried the stories as well as photos of the irregular shaped objects. So did the newspapers and wire services. NEWSWEEK carried it as a six-page lead story in their November 23rd issue. It pointed out that if an asteroid of about 600' in diameter landed in the mid-Atlantic, according to Jack Hills of Los Alamos National Laboratory, the resulting tidal wave would measure 600' in height and would cause the greatest catastrophic destruction in human history. An asteroid of 1-3 miles in diameter could wipe out a large portion of civilization while larger ones would destroy the habitat, and according to NEWSWEEK, "Humans might go the way of the Trilobites."

In March of 1989 asteroid 1989FC (1/2 mile diameter) missed the Earth by a mere 700,000 miles! No one saw it coming. NEWSWEEK: "If it had arrived six hours later it might have wiped out civilization."

A NASA panel estimates that there are between 1,000 to 4,000 asteroids crossing the Earth's orbit that are bigger than a half-mile across. But only 150 are known. An explosion in the South Pacific in 1978, once suspected of being a nuclear test is now thought to have been an asteroid hit. Since this discovery, according to NEWSWEEK, astronomers "scurried" to their telescopes to look for the dangerous rocks. Maybe the "asteroid watch" is similar to our "tornado watches", in that when it became possible to accurately detect bad storms it appeared that the weather was getting worse, when before, the tree blew down in the forest and no one was there to see or hear it. But the danger of asteroids is very real.

An interesting research note: (Source: CLEAR INTENT, 98) "the final answer to the FOIA letter was given by Major General John Marks, Air Force Assistant Chief Of Staff, Intelligence on July 28, 1980. The only event answerable to the request for Vela (special satellite) records was a flash detected off South Africa on September 22, 1979. The data existed only for this event, not Bell Island (where on April 2, 1978 there was a tremendous explosion) or any of the others, even though the source of several of the events was the Naval Research Laboratory's acoustic event report previously cited. And it was stated that the events were Vela events!

The South African flash, itself, is still quite controversial. An "Ad Hoc Panel Report on the September 22 Event" was issued by the White House in July 1980 discussing the Vela detection of the South African flash. The panel did not say specifically what the event was, but it did say that it was not a nuclear blast. Other military sources disagreed with this assessment and opinion today is still divided.

Besides this, the report referred to the fact that the light sensors on the Vela satellite systems "have been triggered several hundred times by signals of unknown origin, "zoo events"!

### PROPOSAL '93

The following proposal is presented here only in brief form to be presented in detail when we have more space.

I began production of the UFO Intelligence Summary in 1986 after working out the parameters with all the major organizations. Cooperation from UFO data sources was very good at the outset and continues to improve. It was the introduction of the personal computer into UFOlogy that made this not only possible, but very important from an intelligence standpoint.

During the last year or so another potential became more clear as computer BBS workstations began inputting, posting and extracting UFO data all across the country. The BBS (Bulletin Board System) holds a great future for PC users and UFOlogists in

the acquisition of UFO data or the sharing of same. Herein lies a great potential for keeping up with UFO activity on a "realtime" basis.

Not being a BBS station, or knowing its limitations, I can only merely point out some basic ideas that the "experts" will have to resolve. I just know that we have a great potential and that anyone with a BBS that is interested in UFOs couldn't or wouldn't pass up the opportunity I am about to describe in brief if the plan will work.

UFO reports in each state are assigned, then investigated, then forwarded to the state directors. Sometimes another person, an investigation coordinator, helps out in this regard. Completed reports are then sent according to plan to MUFON, the DDI (who makes sure they are complete), and sometimes CUFOS. This process is necessary, but slow by its very nature and prevents the current picture of UFO activity from being visualized.

The function of the UFO Filter Center is to create the "realtime" picture of UFO activity. The system works, but there is still time lag that exists for the best cases because they soak up considerably more time in investigation and processing. Here's where the BBS can really shine.

1) The BBS net in each state needs a BBS UFO Net HQ. That BBS needs to log "preliminary" reports of UFO activity in the state it resides in. Some states are already set up, not only with BBS nets, but with UFO enthusiasts at the controls!

2) There needs to be a National UFO BBS Network HQ that can acquire all the monthly (or weekly) input. We already have that potential. MUFONET is operated by John Komar in Memphis, TN.

3) The hard copy data, in the form of printouts, can then be accessed by anyone with a BBS, including the UFO Filter Center, which doesn't have a BBS but can be in contact with one. We're already in business! All we have to do is turn on the computers and have the plan of action outlined. And the only one's that need to help are those who would jump at the chance, the UFO enthusiast with a PC and modem!

The initial reports I am talking about would not be lengthy or difficult input data. The data would consist of only the basics, such as the one line data of the UFO Intelligence Summary shown at the end of this newsletter. This data would probably be inputted at one time each week or each month. An input form would be placed at the BBS station, and could (and should) be placed by all FI's near their telephones as a message slip containing only 10 short questions!

Well, there you have it. I don't know the logistics or the problems, if any. I would greatly appreciate any comments, and/ or criticisms. Either address these to me or to MUFONET, attention: John Komar, 4769 Lake Ridge Dr., Memphis, TN 38109.

#### MARS OBSERVER UPDATE

It seems NASA has a low priority of photographing the area of Cydonia artifacts on the planet Mars. NASA expects that by the end of the Mars two-year mission to have very few opportunities to photograph the alleged city, the supposed face, and the reputed pyramids. (SOURCE: ROUNDTOWN UFO SOCIETY newsletter, Jan/Feb 1993). (Ed: We need a BBS update with the actual source quoted. Anybody out there want to check the computer Bulletin Board System to see the latest? Please forward copy to use here ASAP).

#### MOTHERSHIPS

(Source: NCS-280,5. As witnessed by abductees, the mothership (described as a triangle) also contains laboratories which are involved in technological activities unfamiliar to our planet. Lighted, glowing spheres, usually red, but capable of changing colors, are believed by many researchers to be probes dispatched from the mothership.

#### INTELLIGENCE RESEARCH

Some feel the space age began 50 years ago with the first German V2 rocket being launched. This could coincide with "foo fighters" being seen in World War II.

## INDIANA NEWS

## FRANCIS RIDGE-STATE DIRECTOR NOTES

Samuel Stoneking, SSD for Ripley County, has requested that he be assigned Jennings County. His application was submitted to MUFON with my recommendation.

I have spoken with an individual in Vigo County who may become an FIT in the near future. As soon as he gets some personal business caught up he said he would get back to me.

The state map and District line-up on page six is presented there to illustrate the location and responsibility of each state representative. The 14 Districts outline our areas for Indiana's Rapid Deployment Team consisting of 24 field investigators. State sections comprise only part of these Districts. On computer the list is structured by three indexes:

- 1) Alpha listed by County
- 2) Alpha listed by personnel
- 3) Alpha group-listed by District

Our Rapid Deployment Team is composed of FIT's and FI's who wish to be part of a special team who can, at the time of a UFO sighting flap, choose to take part in special investigations. Normally, investigations are conducted in a routine manner right near the FI's home base. Most cases are generally routine and generally not even really fresh incidents. But the RDT can go anywhere on quick notice simply by choosing that status and practicing a constant readiness outlined in the training program. RDT personnel have a PLL (Prescribed Load List) of materials and equipment ready at all times.

When a sighting occurs, the county is identified and the nearest FI is contacted. If the situation warrants (UFO flap of potential value) FIs will be dispatched over a wide area to the sighting area.

## JERRY SIEVERS-"FROM THE TRAINING OFFICER'S DESK"

Our newest Field Investigator Trainee (FIT) is Linda J. Dahlkemper, 1930 Hampstead Court, South Bend, IN 46614 (St. Joseph County). She's an interior designer with a B.S. degree, a Bachelor in Education/Fine Art. Prime interest is the abduction phenomenon. Ms. Dahlkemper was recommended by John E. Mack! Her phone number is (219) 291-8286.

Leo E. Dwyer of 301 Shoreland Dr., Michigan City, IN (LaPorte County) is another FIT. Mr. Dwyer's phone number is (219) 879-5021. He has a general interest in UFOlogy, has a B.S. degree, is retired at age 48, and is our first member in LaPorte County.

Bruno Molon is an FI and SSD in the nearby county of Lake, to Mr. Dwyer's left. Bruno has been with us for several years and is working on a special project concerning Alien Command Structure.

SSD/FI Will Ott has transferred from Bloomington, IN to Indianapolis. He was SSD for Monroe, Brown & Greene counties. As soon as he gets situated we will announce his new address, phone and duties in Marion County.

FI Thomas Vlaskamp is now in charge of Greene County, vacated by Mr. Ott.

All FITs are asked to send an envelope containing two 29-cent stamps to me at 140 Ramsey Rd., Vincennes, IN 47591. You will receive your next training packet. Your training terminates when you take the FI exam or stop sending the envelopes.

## STATE DISTRICT MAP

The map on page six illustrates the 14 Districts for rapid deployment purposes. These Districts contain Sections of one or more counties under State Section Directors. Names and addresses of FI personnel are placed on the map for information only. Their locations are listed on computer by district, county and city.
