

UFORCOP NEWSLETTER

NOVEMBER 2012

[Welcome To The UFORCOP Monthly Newsletter](#)

You can file a report or obtain information by going to our [Contact Us](#) page and filling out the form and hit the submit button. [A researcher will contact you within 24 hours.](#)

Anyone wishing to have a presentation given to a group can use the [Contact Us](#) page on the website.

ANNOUNCEMENT: In this and future newsletters we will include Researcher Tips and Equipment usage in the field.

BOOK OF THE MONTH: MANITOU, Fountains of the Deep by, Daniel Lauing available at www.ozufo.net

SITE OF THE MONTH: www.sightingsreport.com

UFORCOP NEWS

We research cases in Pennsylvania and other states and countries. If you have a present or historical case you would like researched contact, butch@paufosearch.com

We **do not** comment on other group's investigative results. If you have an issue with those results contact the investigator or group you dealt with. Thank You.

Due to the increase in traffic on our website we have increased our bandwidth considerably which should handle any issues.

REPORT A UFO SIGHTING

To speak with one of our researchers, please send us an [email](#) and include the following information.

Your name

Contact phone number or email address

Date and time of event

Location (city / county / state)

Brief description of your sighting

How many witnesses were involved?

How close were you to the object?

Attach any Photos, Drawings or EVP recordings.

Information above is strictly confidential.

Email us at butch@paufosearch.com

UFORCOP MOBILE UNITS Fully equipped and based in the Eastern and Western sections of Pennsylvania, which allows us to cover any report within a matter of a few hours.

UFORCOP Is looking for reports of mysterious lights or sightings of UFOs around Nuclear Power Plants, Military Bases, or Airport facilities.

PARANORMAL

UFORCOP will be going to the **Gettysburg Battlefield** area in the autumn of 2012 to investigate reports of sightings at that location.

CRYPTO ZOOLOGY

Anyone with information on sightings in Pennsylvania of Panthers, Mountain Lions, Cougars, Thunderbirds, Large Snakes, or Bigfoot. Please email madhunterpa@gmail.com or apecounterpa@gmail.com or hellhunterpa@gmail.com

MOST REPORTED CREATURES IN PENNSYLVANIA

Cougar, Coyote, Wolf, Bear

LEAST REPORTED CREATURES IN PENNSYLVANIA

Bigfoot, Thunderbirds, Large Snakes.

BIGFOOT REPORTS FOR PENNSYLVANIA

A total of six reports so far this year. **All unconfirmed.**

ANIMAL MUTILATIONS

There have been **no reports** of Cattle Mutilations in Pennsylvania that can be located and verified.

UFORCOP NOTE

We do not accept donations of any type. We are self-funded. We do not charge a fee for Research or Investigations.

NEWS FROM THE FLORIDA RESEARCH GROUP

Next Meeting: November 10, 2012

Time: 1 PM

Location: Perkins Restaurant and Bakery, 6425 University Blvd., Winter Park, FL

Topic: Abduction and Paranormal Events and Methods of Investigation and Research.

We will have a panel discussion with four authors. From the paranormal field Vivian Campbell who lives in a haunted house with her two daughters, and another author who travels Florida exploring our state's haunted locations. The other two guests on the panel will be Kathleen Marden, niece of Betty and Barney Hill, the first abductees whose case continues to be researched today and Denise Stoner who is working on the abductee phenomenon with Kathleen. The panel will talk about their research and various experiences in both fields and the methods used in their work. After a break, we will open up to questions and discussion for all attendees.

That room will be available until midnight and the only requirement is attendees should purchase a meal, which are really reasonable, and a drink. We will have our own waitress for that room who will keep us supplied with water and drinks.

October 26, 2012 "Night of the Paranormal" at the Daytona Museum of Arts and Sciences, Host Charlie Carlson.

UFORCOP Florida Research Group Director, Denise Stoner talks about "Abductions and the Experiencers"

Minot Launch Control Center 'Saucer' Cited As One Indication Of Outer Space Visitors

More than three months after it reportedly occurred, an Unidentified Flying Object sighting in the Minot area has been blown up as the lead-off topic in an article entitled "Are Flying Saucers Real?" which appears in the latest issue of Saturday Evening Post magazine.

This sighting, says the Post article, occurred at a Minot Air Force Base Minuteman missile launch control center. Date of the incident is given as Aug. 23, 1966.

Base information officers confirmed such a report was made. It was never released in Minot, but was sent to Wright-Patterson Field in Ohio. From there, it presumably was channeled to the Secretary of the Air Force's office—and he, again presumably, released it to the magazine.

The article is by Dr. J. Allen Hynek, identified as chairman of Northwestern University's astronomy

department and an Air Force consultant on "flying saucers" from 1946 until this year.

The Minot incident is detailed in this manner:

A launch control center officer, who was in an underground capsule, discovered static was interfering with radio transmission. While he was attempting to clear the problem, personnel on the surface reported seeing a UFO with a red light high in the sky. At the same time, a radar crew picked up the object at a height estimated at 100,000 feet.

Static stopped when the object climbed, the report maintains. After climbing, it began to swoop and dive, then apparently landed some distance away.

"Missile-site control sent a strike team . . . to check. When the team was about 10 miles from the landing site, static disrupted radio contact with them. Five to eight minutes later, the glow diminished and the UFO took off. Another UFO was visually sighted

and confirmed by radar. The one that was first sighted passed beneath the second. Radar also confirmed this. The first made for altitude toward the north and the second seemed to disappear with the glow of red."

It also is Hynek's assertion that a similar incident occurred near the Minot base a few days earlier. The article does not quote any names of persons involved, but states:

"A police officer—a reliable man—saw in broad daylight what he called an object on its edge floating down the side of a hill, wobbling from side to side about 10 feet from the ground. When it reached the valley floor, it climbed to about 100 feet, still tipped on its edge and moved across the valley to a small reservoir."

"The object, which was about 20 feet in diameter, next appeared to flatten out and a small dome became visible on top. It hovered over the water for

about a minute, then moved to a small field, where it appeared to be landing. It did not touch the ground, however, but hovered at a height of about 10 feet some 250 feet away from the witness, who was standing by his parked patrol car. The object then tilted up and disappeared rapidly into the clouds. A fantastic story, yet I interviewed the witness in this case and am personally satisfied that he is above reproach.

Hynek also details what he terms "one of the most puzzling cases that I have studied," this occurring in 1853 in the Eismarck area.

"It started, he claims, when persons northwest of Rapid City, sighted objects, blips also appearing on radar screens at Ellsworth AFB. An F64 jet dispatched aloft reportedly radiolocated the object moved twice as

Images of ghostly skeletons on Borneo jungle track caught on film. 2,400 Australian and British PoWs marched 160 mile by Japanese, but only six survived Men died of exhaustion, starvation, beatings or bayoneted.

PINK UFO PHOTOS ON GOOGLE STREET VIEW

Seen on Google Street View cameras, a number of Pink UFO's have been reported and going viral on the net. They are nothing more than Lens Flares. They have been seen in Texas, Mississippi and Australia to name a few locations.

Lens flare is particularly caused by very bright light sources either in the image – which produces visible artifacts – or shining into the lens but not in the image – which produces a haze. Most commonly, this occurs when shooting into the sun (when the sun is in frame or the lens is pointed in the direction of the sun), and is reduced by using a lens hood or other shade. It also comes into play when shooting towards bright artificial light.

SPECIAL ANNOUNCEMENT

The UFO Research Center of Pennsylvania would like to welcome the members of the new UFORCOP Missouri Investigators Group. This group of dedicated and diligent researchers of the UFO Phenomenon, the Abduction Scenario, and the Paranormal along with Crypto-zoology has proven time and time again that their investigative talents are above and beyond the norm. In the coming weeks this group will have on going, and completed cases posted on the UFORCOP web site along with their contact information. They will handle all cases in the State of Missouri.

NEWS FROM THE MISSOURI INVESTIGATORS GROUP

Next Meeting: No meeting scheduled this month.

Time:

Location:

Currently working on a project looking at the proximity of UFO and Paranormal reports and Native American mounds and finding interesting correlations.

Report sightings on the UFORCOP website contact page or use the report form at:

<http://ufomig.yolasite.com/online-report-form.php>

**INFORMATION
FOR THE
UFO
AND
PARANORMAL
RESEARCHER**

THE METAL DETECTOR

OPERATION

Operating a metal detector is simple. Once you turn the unit on, you move slowly over the area you want to search. In most cases, you sweep the coil head back and forth over the ground in front of you. When you pass it over a target object, an audible signal occurs. More advanced metal detectors provide displays that pinpoint the type of metal it has detected and how deep in the ground the target object is located.

A typical metal detector is lightweight and consists of a few parts.

- **STABILIZER** – Used to keep the unit steady as you sweep it back and forth.
- **CONTROL BOX** – Contains the circuitry, controls, speaker, batteries and the microprocessor.
- **SHAFT** – Connects the control box and the coil and is often adjustable so you can set it at a comfortable level for your height.
- **SEARCH COIL** – The part that actually senses the metal. It is also known as the “Search Head”, “Loop” or “Antenna”.

Metal Detectors use one of three technologies:

1. (VLF) Very Low Frequency
2. (PI) Pulse Induction
3. (BFO) Beat Frequency Oscillation

HOW DO THEY WORK?

REMEMBER...the receiver coil is completely shielded from the magnetic field generated by the transmitter coil. However, it is not shielded from magnetic fields coming from objects in the ground. Therefore, when the receiver coil passes over an object giving off a magnetic field, a small electric current travels through the coil. This current oscillates at the same frequency as the object's magnetic field. The coil amplifies the frequency and sends it to the control box of the metal detector, where sensors analyze the signal.

Interestingly enough, the metal detector can determine approximately how deep the object is buried based on the strength of the magnetic field it generates. The closer to the surface an object is, the stronger the magnetic field picked up by the receiver coil and the stronger the electric current generated. The deeper below the surface the weaker the signal field can be. Beyond a certain depth, the object's field is so weak at the surface that it is undetectable by the receiver coil.

(VLF) VERY LOW FREQUENCY METAL DETECTOR

This type of detector relies on a phenomenon known as "Phase Shifting". Phase shift is the difference in timing between the transmitter coil's frequency and the frequency of the target object.

Many metal detectors even allow you to filter out objects above a certain phase-shift level. Usually, you can set the level of phase shift that is filtered, generally by adjusting a knob that increases or decreases the threshold.

Another discrimination feature of (VLF) detectors is called “Notching”. Essentially, a notch is a discrimination filter for a particular segment, as normal discrimination would, but also to objects below it.

(PI) PULSE INDUCTION METAL DETECTOR

This is a less common form of metal detector and is based on pulse induction. This technology sends powerful, short bursts (pulses) of current through a coil of wire. Each pulse generates a brief magnetic field. When the pulse ends, the magnetic field reverses polarity and collapses very suddenly, resulting in a sharp electrical spike. This spike lasts a few microseconds and causes another current to run through the coil. This current is called the “Reflected Pulse” and is extremely short, lasting only about 30 microseconds. Another pulse is then sent and the process repeats. A typical PI-based metal detector sends about 100 pulses per second, but the number can vary greatly based on the manufacturer and model.

If the metal detector is over a metal object, the pulse creates an opposite magnetic field in the object. When the pulse’s magnetic field collapses causing the reflected pulse, the magnetic field of the object makes it take longer for the reflected pulse to completely disappear. This process works something like “Echoes”.

NOTE: PI based detectors are not very good at discrimination because the reflected pulse length of various metals are not easily separated.

(BFO) BEAT FREQUENCY OSCILLATION METAL DETECTOR

This type of detector is great for finding buried objects. But typically, the object must be within a foot or so of the surface for the detector to find it. This system utilizes two coils of wire. One large coil is in the search head and a smaller coil is located inside the control box. Each coil is connected to an oscillator that generates thousands of pulses of current per second. The frequency of these pulses is slightly offset between the two coils.

When the coil in the search head passes over a metal object, the magnetic field caused by the current flowing through the coil creates a magnetic field around the object. The object's magnetic field interferes with the frequency of the radio waves generated by the search-head coil. As the frequency deviates from the frequency of the coil in the control box, the audible beats change in duration and tone.

AS A UFO OR PARANORMAL RESEARCHER, YOU NEED TO CONSIDER THIS TYPE OF EQUIPMENT...

Over the years of investigative research into the phenomenon known as Ufology and the Paranormal have changed. Forensic trace evidence has come to play a major roll into the success or failure of the outcome of investigations. At anytime during your investigation should you find any type of physical trace evidence, equipment such as a "Metal Detector" could be an invaluable tool that should be utilized on the actual event-site. Even when dealing with a "Cold Case File", you never knows what piece of evidence may be uncovered (6) six inches under the topsoil, hidden and out of sight.

Many case files record the finding of unknown metals. Just think what else was never found because the investigator was not afforded the means or opportunity to utilize modern

forensic detection equipment, such as a Metal Detector, to gather additional trace evidence.

TOOLS TO ACCOMPANY YOUR DETECTOR

Garrett Tools™ can be found at www.garrettcentral.com

A well done, and proper approach to the Paranormal Investigation is a white paper put out by the Spirit Society of Pennsylvania, www.spiritsocietyofpa.com

It is available on their home page and titled Paranormal Investigation Development 101. A must read.

A copy in your field case or bag would be a good idea for reference on an investigation.

NEW UFORCOP PATCH

NOTABLE UFO QUOTES

"The evidence is overwhelming that Planet Earth is being visited by intelligently controlled extraterrestrial spacecraft. In other words, some UFOs are alien spacecraft. Most are not. It's clear from the opinion polls and my own experience, that indeed most people accept the notion that some UFOs are alien spacecraft. The greater the education, the more likely to accept this proposition"

-- Stanton Friedman Defense Contractor Nuclear Physicist

"The UFO phenomenon being reported is something real and not visionary or fictitious"

--General Nathan Twining Chairman, Joint Chiefs of Staff, 1955-1958

"When the long awaited solution to the UFO problem comes, I believe that it will prove to be not merely the next small step in the march of science, but a mighty and totally unexpected quantum leap." "We had a job to do, whether right or wrong, to keep the public from getting excited"

--Dr. J. Allen Hynek, Director US Air Force Project Blue Book as a Scientific Consultant, Astronomer, Investigator.

PENNSYLVANIA SIGHTINGS REPORT

OCTOBER 2012

THERE WERE A TOTAL OF **51** SIGHTINGS REPORTS FILED FOR
THE MONTH OF OCTOBER IN PENNSYLVANIA.

SOME MAY BE DUPLICATES AS THE NUMBERS ARE
FROM 4 REPORTING AGENCIES INCLUDING UFORCOP.

UPCOMING FIELD TRIPS FOR THE SEARCH TEAM

- **MISSOURI**
- **OHIO**
- **NORTH CAROLINA**
- **FLORIDA - 2013**
- **WESTERN PA**
- **WEST VIRGINIA - 2013**
- **NORTH CENTRAL PA**
- **SOUTH CENTRAL PA**
- Completed Field Trips in Light Blue.
