THE SUDDEN INFANT DEATH SYNDROME (SIDS)

Question:

Every year in the United States about ten thousand babies are victims of the mysterious "Sudden Infant Death Syndrome", (SIDS), commonly called 'crib death'. These are all apparently healthy infants, usually between the ages of 4 weeks and 7 months, who are found dead in their cribs anywhere from 10 minutes later to a number of hours later. Post-mortem examinations fail to find an adequate cause of death. Researchers find that crib deaths are not caused by a killer virus, that it is not hereditary, that it cannot be prevented or even predicted by a doctor, and that it is not caused by suffocation, aspiration or regurgitation. There are 31 SIDS centers in this country which try to provide newly bereaved families with information about SIDS's and doctors and clergymen how to cope with the wide spectrum of painful questioning feelings of these parents, some of whom are numb from grief, bitter and anti-God. Would Awareness please tell us what the "Sudden Infant Death Syndrome" really is, and what, if anything, can be done about it?

Cosmic Awareness:

This Awareness indicates there have been experiments conducted, which are well known in the fields of psychology, wherein infants were raised without being touched by human hands for a certain period of time. This Awareness indicates that in this experiment, these infants began to show signs of disease and began to die, often for no apparent reason.

This Awareness indicates that when this occurred, the doctor in charge then began to ask that the attendants and nurses take the children and hold these children, giving them affection.

This Awareness indicates that then the children began to live, the rate of mortality went down.

This Awareness indicates that the crib death situation is similar to this. That entities moving into the body of a child, forming their bodies upon this plane, do not remain at all times within that body, but enter as a conscious entity and often leave for brief durations, leaving the subconscious to attend the body.

This Awareness indicates that wherein the child does not fully become used to being in the physical body, has not completely oriented himself or herself to that new home, and is still tied in part to the Inner Plane, traveling in and out of the physical body, and wherein the situation in the physical body is not one which is pleasant, often the conscious entity decides not to return, and the subconscious part which resides within the body, though it remains for some time, may also decide that it is an unpleasant situation, or that it is lonely and may simply leave the body.

This Awareness indicates that the term 'subconscious' and 'conscious' are terms which are familiar to most entities upon this plane. This Awareness suggests that entities may read the works of Max Freedom Long* wherein the Kahunas have a term for the subconscious, which is the lower self; the conscious being the middle self, and the superconscious being the high self.

This Awareness indicates that with children, the lower self enters into the fetus while still in the womb, and this brings about the birth, the growth of the fetus, the birth of the child and the early stages of its life. That generally speaking, the middle

self or the conscious mind, does not enter at the time of birth, but waits for some time. This Awareness indicates this as seen by entities wherein they begin to notice their child is developing a personality.

This Awareness indicates that the higher self, or spiritual self, is that which hovers near the body and guides the entire experience and affects the consciousness of those around. This Awareness indicates this as often thought of as the guardian angel.

This Awareness suggests that in reality, these are all three interconnected as a 'triune self', but wherein the body does not contain all three, wherein an integration has not occurred, the entity is not complete. And wherein the higher self does not remain within the body, and the middle self does not enter into the body, and wherein the lower self decides that it is not a pleasant situation, the triune self is withdrawn, leaving only the carcass.**

This Awareness suggests that for entities to avoid the crib-death, that the child needs to be held as much as is possible. The more affection and attention given to the child, the more pleasant the environment, the greater the chances for the child to survive, to remain within its body.

This Awareness indicates these early stages are very important moments, and the life and vitality of the child is fluctuating between being within the body and in the other plane. That when the child is sleeping, essentially the child is on the other side, leaving just enough vitality in the body to keep it alive. That wherein the desire for that life diminishes, the child may simply withdraw.

ED'S NOTE:

More information on birth and death and their cosmic implications will be found in the Cosmic Awareness Spiritual Development Correspondence Course, published by Cosmic Awareness Communications, and which is mailed to all C.A.C. members every two weeks along with various other communications excerpted from the trance readings given by the entity, Paul Shockley, trance-interpreter for Cosmic Awareness.

**For complete information on the subject of the 'Triune Self' the book,

Thinking and Destiny, by Harold Waldwin Percival, published by The Word Publishing Co., New York, N.Y. is highly recommended. Also available from C.A.C.

POSTSCRIPT TO THIS READING: Awareness has also indicated in previous information on the Sudden Infant Death Syndrome, that if the crib or bed in which the infant lies is raised slightly so that the head is higher than the feet, that this can also help prevent S.I.D.
