

" THINGS WE SEE!"

A Kingsborough (Hodgkinson) correspondent writes under July 28th: "On Thursday last some large white object was seen floating through space at Woodville (those who saw it told a reliable miner) at a good height from earth, bearing north and moving at a fast pace on a steady course. The men stated it was too large to be an elephant, much less a bird. Hence it is thought it may probably have been an airship. I may add that the only liquid refreshments obtainable at Woodville is a beer brewed from wild rosellas by the genial Jack Moffat, and I don't think that would cause optical illusions. Speaking seriously, the old men saw some object in the sky, and from the descriptions given, it certainly was not a bird or a balloon. It appeared, they state to be a long cylinder-like body, with conical ends. This information is being forwarded to other papers, and I am sending it to you for what it is worth.
