

That Strange Light.

Mr. J. Linden (Gympie) writes : Sir,—
In your issues of 25th and 27th instant I noticed paragraphs referring to a strange light in the northern sky on Tuesday night. On Tuesday night, between 8 and 9 o'clock, I happened to see a brilliant meteor travelling across the sky in a north-easterly direction. It left a trail of sparks which appeared to be about 30ft. in length. After some minutes, it turned into what seemed like a tail of a comet. It gradually turned into a triangle, and then into a semi-circle, then disappearing. It could be seen for about 20 minutes.
