

## Strange "Meteors" Seen In France

LONDON, Sept. 13 (A.A.P.).— Mysterious "meteors" which flashed through the sky from south to north last night have been reported by people in Nancy, says Reuter's Paris correspondent.

One eye-witness said they could not possibly have been lights on an aircraft or shooting stars.

"Two luminous globes linked by a line of fire and followed by a phosphorescent tail moved across the sky far more quickly than the fastest fighter plane," he said.
