

# **“Flying Saucers” At Grafton**

**Mysterious discs resembling the “flying saucers” reported from other parts of the world have been seen in Grafton. Mr. W. Quinlan, of Grafton, while on the river yesterday afternoon reported the presence of shining formations in the air about 2.30 p.m.**

Mr. Quinlan with his wife and son were spending the afternoon in the River in a boat.

“I was looking in the air at the plane which had previously departed from South Grafton, and I noticed this shiny thing,” he stated.

Mr. Quinlan described them as being transparent and disc-like in shape. They appeared to be caught in the eddy of the wind.

Mr. Quinlan pointed out the objects to some officers of the S.S. Ulmarra which had just secured to Grafton wharf.

## **MANY THEORIES.**

This report coincides with other

**This report coincides with other accounts of the "flying saucers" observed in Australia and U.S.A. Scientists have advanced the theory that it may be the presence of life yet unknown and could be evidence of other life in the universe. An American aviation authority also remarked that the "saucers" may be a form of secret aircraft that has not yet been divulged by a foreign power. A saner explanation by a Sydney professor, is that these objects are due to blood corpuscles passing before the retina of the human eye. Experiments conducted with students at the University of Sydney seem to prove this theory.**
