

'Saucers' Over France

PARIS, Wed (AAP): Newspapers today reported that a "flying saucer meteor" had been seen travelling east to west over Nice in the French Riviera.

It resembled a round, red ball tinged with blue and had a long train.

It appeared to come from the Italian frontier.

● *On July 5 last year airmen reported in Boise (USA) having passed nine "flying discs." They describe them as "flat and round and bigger than aircraft." The discs had been widely reported over Western States.*
