

# A Believer In Flying Saucers

ROME, Sat (AAP): Italy's leading turbo-jet expert Professor Giuseppe Belluzzo said today that there are such things as flying saucers.

He said that Germany and Italy developed them in 1942 when he was Fascist Economy Minister for the Axis.

The discs, he said, were made of a lightweight metal. They were jet-propelled, but they spun when airborne.

Hitler and Mussolini examined the weapon "which would have won the war but for the incompetent, immoral people who are held today in high esteem."

● *Flying saucers have been reported many times in the U.S. and less frequently in other parts of the world. Some experts take them seriously but others regard them as a figment of mass-imagination.*
