

Those Flying Saucers

NEW YORK, March 28

A private pilot reported that he saw a flying saucer within 25 miles of Washington to-day.

Malcolm Patten, a clerk at the Congressional Library, says he was flying at 5,000 feet when he saw near him a coloured saucer 40 feet wide and 10 feet through. It was whirling along at 1,000 feet below his plane.

Patten said "I don't know what caused it, but before I could set my plane towards it, it soared up into space at several hundreds miles an hour."

He said the saucer gave off smoke trails like those from aircraft engines
