

## U.S. 1942 Model Resembled "Flying Saucer"

Regarded as possibly the forerunner of "flying saucers," this one-third scale model was built in 1942 for wind tunnel tests at the Langley, Virginia, laboratory of the US National Advisory Committee for Aeronautics. The US News and World Report for April 7 published this picture, adding: "There is competent evidence that flying saucers are real aircraft of revo-

picture, adding: "There is competent evidence that flying saucers are real aircraft of revolutionary design, developed in the US."
