

BLACK "FLYING SAUCER" IS REPORTED ON SOUTH COAST

SYDNEY.—A black "flying saucer" has been reported from the South Coast.

Four women residents of Lake Illawarra reported that they saw a large black disc-shaped object yesterday travelling at "terrific" speed.

The women were fishing when they claim they saw the object shoot around the mountain in the Saddleback Range.

Mrs. C. Lehman said, "It looked like a black disc and seemed to leave a trail of vapor.

"It appeared to be about 6 to 9 feet in diameter. I could see its shadow on the mountain. It moved in zigzag fashion.

"We watched it for half an hour. Then it seemed to disappear into the side of the mountain."
