

## Sky Trail Of Light

No reports have been received at the Weather Bureau of a strange light in the sky early this morning.

A number of people, who were abroad at an early hour this morning, said they had seen a strange very bright light in the sky.

However, a Weather Bureau official said the light could have been caused by a meteorite, which was not uncommon.

A Paddington report described the light as a blue flash, followed by a tail of light which gradually faded out.

A Taringa resident on his way to work this morning, said he thought someone was flashing a torch behind him, on the pavement. He looked round and saw a long tail of light in the sky. He watched it for a few seconds, and then it faded.

At Northgate, the flash lit up the whole area. The tail of light took more than a minute to fade completely.
