

Britain has 1st "saucer"

LONDON, June 8 (Special).

—The first flying saucer has been officially reported over Britain.

A meteor jet fighter flying at nearly 40,000 feet he saw it. On landing he reported having seen a "shining disc-like object" revolving and travelling faster than 400 miles an hour—his own speed.

As the pilot was unshaken under cross-examination, his report went to Fighter Command, and was considered by senior officers and weather experts.

Decision—the pilot saw something unusual, but there was no evidence that it was other than some natural or meteorological phenomena.
