

# THIRD "SAUCER" REPORT

A Mount Gambier woman came into "The Border Watch" office this morning with a report of a "flying saucer."

She was Mrs. M. L. A. Stewart, of Powell Street, who said she saw what she believed was a saucer three months ago, but thought no more about it until other reports were published recently.

Hanging her washing on the line, Mrs. Stewart had her face turned sky-wards when she saw the object travelling at high speed in a north-westerly direction. This occurred just after Easter.

She said she saw for a few seconds a bright object at high altitude which looked the size of a

tude which looked the size of a football. It had been crossing the path of the sun when it attracted her attention.

### **MISSILE THEORY**

Mrs. Stewart suggested that the saucers might be missiles from the Central Australian rocket range. She said that radar controlled missiles which became misguided or off the radar beam travelled in a circuit in the sky until they lost their power or eventually hit something.
