

"FLYING SAUCER" AT LUCINDA?

Waterside workers at Lucinda, in the Ingham-district recently sighted what they believe may have been a "flying saucer."

The strange object, semi-circular in shape, was seen at a great height by men working in the hold of a vessel loading sugar.

It glistened brilliantly in the sun, giving the impression of a highly polished metal finish, and discounting the possibility that it may have been a bird.

As the watersiders watched, the object began to wobble, then moved out to sea at a tremendous speed, soon to be lost to sight.

"It seemed to travel faster than a bullet," said the watersider who first spotted the object.

Many controversial explanations have been offered for the "flying saucers" reported to have been sighted in various parts of the world in recent years.

One school of thought is that the strange objects are new top-secret experimental American aircraft.

However, Dr. Silas Newton Denver (U.S.) University geophysicist, asserted recently that the saucers were inter-planetary space ships, operated along the lines of magnetic force.

He added that flying saucers piloted by little men from another planet would land on the earth soon.

Four flying saucers had landed on the American continent, and were being studied by the United States Gov-

ing studied by the United States Government, he declared. A fifth had crashed in Africa.

Newton added that the bodies of 34 men, ranging in height from 38 to 42 inches, had been taken from the wrecks.
