

A GENUINE "FLYING SAUCER"

Wearing a bizarre hat, designed by himself, Arthur Sanger, a 19-year-old dental mechanic of Southampton, England, shows his model "flying saucer." The "saucer" is powered with a jetex rocket motor and flies for about 30 seconds at heights of up to 100ft. It is the latest of Arthur's fleet of 200 miniature aircraft and took three months to build.
