

“Flying Saucer” Seen By Highfield Resident

An object, believed at the time to possibly be a “flying saucer,” observed by a woman at Tumbulgum, near Murwillumbah, early on Wednesday night, was seen by a staff member of the “Examiner.”

Mr. J. Bodero, linotype operator, who lives at Highfield, noticed what appeared to be a blue ball travelling at great speed sweep across the eastern horizon about 7 p.m.

The object appeared low over the range of hills between Kyogle and Larnook and travelled on a straight course parallel with the earth.

It disappeared in a south-westerly direction in about three seconds.

Mr. Bodero said that the object appeared to be a blue ball in the early evening light. The stars had a bluish tint at the time.

He did not notice the tail reported by Mrs. Holmes, of Tumbulgum.

It was impossible to give an estimate of the size of the object or the distance it would be from Kyogle. He thought it may even be out to sea.

Further reports of having seen the object about the same time were

object about the same time were made by persons living as far south as Kempsey.

It was reported last night that the body had been identified by a meteorologist as a meteor travelling unusually close to the earth's surface.
