

# QUEENSLAND SEES FLYING SAUCERS

**Sydney—The "Flying Saucer," which many people saw in Southern Queensland and Northern New South Wales on Wednesday night, has been identified as a meteor.**

The Government Astronomer (Mr. Harley Wood) said there was no doubt that the object was a meteor. "In fact, two of the descriptions we had of a saucer were the best we have ever had of a meteor." said he.

The object had been seen within five minutes at such widely scattered places as Glen Innes, Kempsey, Homebush and Brisbane.

The meteor would be about 80 miles up and travelling faster than 25 miles a second. That was the reason why it was seen over such a wide area, Mr. Wood explained.
