

## **CAPTIVE SAUCER**

**T**HE only flying saucer in captivity—of plastic material six feet in diameter—will gyrate above the heads of visitors to the Festival of Britain Exhibition in Manchester, Leeds, Nottingham, and Birmingham this year. The inventor, Mr. Richard Levin, Chief Designer of the Exhibition, intends to hold a demonstration flight on Hampstead Heath to test out the "saucer," which he has named the Ectoplat. There are no visible means by which the saucer is kept in the air. How, is the inventor's secret.
