

"FLYING SAUCER" OR METEOR SEEN BY LOCAL MAN

A Kenmore worker claimed today, that he had seen a "flying saucer" while cycling to work at 6.10 a.m., last Saturday.

He is Mr. Neville Herden, of Taralga Road.

His report follows claims by at least a dozen Sydney people, and several living on the South Coast, that they saw objects in the sky on Saturday morning.

Mr. Herden said he was about a mile from his home and six and a half miles from Goulburn when he saw "a string of lights which seemed to have a tail at the end."

His description of the object is: "Cigar-shaped object which was about 1,000 feet in the air and travelling at slow speed with no noise."

Mr. Herden said a heavy fog was lifting at the time, but he watched the string of lights for about a minute as the object moved from West to east.

A METEOR?

The Deputy Director of the Meteorological Bureau, Mr. J. Hogan, last night commended a report sent to him from a Towadgi resident, who said:

"It had the appearance of a comet or meteor that had been broken up into three or four smaller pieces, together with an accompanying amount of sparks, which were probably the smaller pieces of the original body. It flew from west to east. I would attribute the "sparks from the exhaust" as the finer particles

such as one sees in the tail of a comet."
