

LOCAL RESIDENTS SEE "FLYING SAUCER"

Echuca has entered the flying saucer field.

During the past several days there have been reports from various centres throughout the Commonwealth of "flying saucers" having been seen in the sky, and a possible explanation that the phenomena were meteors was given yesterday by an astronomist.

Two local residents were amongst those who saw Saturday's early morning flying saucer which, they said, was visible for about two or three minutes.

They were Messrs W. Buter and De Briuyne who witnessed the phenomenon at about 6.10 a.m. on Saturday.

Mr Buter said yesterday that the "saucer" was elongated, and was of a similar shape to a cigar. Crossing the sky from west to east, it was fairly high up and was of similar color to a star.

Mr Buter, who like Mr De Briuyne, is a Dutch migrant, likened the "saucer" to a V2 bomb of which he saw a number.
