

'Flying Saucer' at Dawn

The "flying saucer" reported as having been seen at a number of points in New South Wales and Victoria on Saturday was also seen by a Cobram farmer.

Mr L. Nunan, a farmer on the Cobram-Katamatite Road, south of Cobram, saw the "saucer" when he went out to collect firewood shortly after 6 a.m. on Saturday.

He did not see the "saucer" clearly enough to distinguish its shape, but watched its illuminated vapor trail for about 10 seconds, as it streaked across the sky at terrific speed.

Mr Nunan said that in the brief time that he watched the missile, it must have travelled 50 or 60 miles. It travelled from west to east, and he lost sight of it as it merged with the light of dawn on the horizon.

He said the object, whatever it was, was an "uncanny sight."

It appeared to be a huge star, and travelled horizontally.

When he went inside he told his wife, "I suppose you will think I am silly, but I think I have just seen a flying saucer."

Mrs Nunan telephoned the "Courier" to tell of her husband's experi-

ence, because she thought it should be reported. Her husband, she said had not wanted his name published.

Earlier, a railway guard was reported to have seen the "saucer" from his van at Benalla, which is about 40 miles from Cobram.

Among others who reported seeing the missile was an interstate transport driver, who said he and his wife saw the spectacle when passing through Benalla.
