

EDGEHILL MAN SEES "FLYING SAUCER"

An Edgehill farmer claims he saw a "flying saucer" over Henty early on Saturday morning.

The "flying saucer" coincides with others seen by various people in N.S.W. about the same time.

In a letter to the Editor this week, he said: I also saw the "flying saucer" at approximately 10 minutes past 6 o'clock. I saw a blazing ball of fire coming from the south-west, at a very fast speed. It passed across the swamp towards Henty, and disappeared into the light of the coming sun.

"It was of a blazing orange colour, with a trail of atomic dust flying backward from the object.

NO SOUND

"What was most noticeable was the absolute silence—there was no sound of any kind. It was a very calm morning.

"I had a side-on view of the "flying saucer" and the whole thing was ablaze. It did not travel as fast as a shooting star or meteor. but only took about

or meteor, but only took about 15 seconds from when I saw it to come down west and pass over Henty.

"It was not flying very high, and was not far away. It appeared to ease up for a few seconds when crossing the swamp "I later had a look at a world map. and noted the way it went was toward the Americas. No doubt, the "flying saucer" comes from there; they have something very far advanced in air travel."

MANY REPORTED

Thousands of "flying saucers" have been reported by people in many parts of the world in the last six years.

Of the latest crop of reports, Dr. J. H. Piddington, principal research officer of the Radio-physics Department of the C.S.I.R.O., says he believes that they are caused by light reflecting from very high clouds.

Air Force and Civil Aviation Department spokesmen say that, as far as they are concerned, the things must be meteors.
