

Saucer smelt like rotten egg

MELBOURNE. — Miss Gertrude James, of East St. Kilda, said she had seen a flying saucer that "smelt like a rotten egg."

She said the saucer also left a smell like sulphuric acid.

Miss James stated: "A green ball flashed noiselessly over rooftops about 7 p.m.

"It was flying too fast to be a plane and not fast enough to be a meteor.

"It did not seem to be sure where it was going.

"It swerved several times, then steered back to its former course.

"The green light went out twice for a couple of seconds, but flashed on again.

"The object had a glowing tail, as though jet-powered."
