

Flying Saucer?

That many children to-day are alert to the mystifying phenomena publicised throughout the world is indicated somewhat by the vivid story related last weekend by two juveniles of Undera.

Alex Matthew and his sister, Ethel, on bicycles, were on their way to school about 8.30 on Friday morning.

Suddenly they heard a noise resembling that of a galvanised iron tank being conveyed on a truck over rough ground. They rode on to the bridge over a channel, but could not see any conveyance on the roads or farms. Looking skyward they were amazed to see a saucer-shaped object, although apparently revolving slowly, speeding away at a great speed.

It was silvery colored, with brown streaky markings, and a yellowish vapor or smoke was being ejected from it. Alex stuck to his story when in Kyabram on Saturday morning, and he was positive it was not a helicopter.
