

Flying Saucer hit him!

A SCOUTMASTER in Florida says he had a brush with a "flying saucer" when motoring. What offence did he give to this visitant or apparition? Up to now flying saucers have cruised the skies, showing a marked preference for the American sky, without doing any harm to anyone. Are they becoming belligerent?

People who say they have seen a flying saucer have nothing to show to prove their story.

If a man now comes home with a black eye or a broken nose and says that a "flying saucer" hit him will he have better luck in getting his story accepted?
