

"SAUCER" A BALLOON?

A group of men who recently saw the mysterious object—likened to a flying saucer—in the sky above Rockhampton believe it was merely a meteorological balloon at large. They saw the object about 10 a.m., travelling north to south, for about 15 minutes. It was round and was silverish in colour. The men estimated its height to be about 20,000 ft. Balloons are released at meteorological stations and their flight followed with instruments in the course of compiling weather information.
